## ACKNOWLEDGEMENTS

I wish to express my sincere gratitude and acknowledgement to this research's formulators Dr. S.A.S. Kulatilaka, Department of Civil Engineering, University of Moratuwa who took very keen interest in this project. His guidance and constructive criticism made by vast research experience were of enormous help to plan and execute the project.

It is a pleasure to take this opportunity to record my gratitude to Dr. U. G. A. Puswewala, the course co-coordinator for the M.Eng. Degree Course in Geotechnical (Year 2000/2001) and Senior Lectures, University of Moratuwa, for the proper coordination and monitoring

I am deeply grateful to the Director Geotechnical Engineering Division, National Building Research Organisation for giving me opportunity to conduct this research and for granting permission to use necessary data.

## TABLE OF CONTENTS

---

<b>1. Introduction</b>	<b>1</b>
1.1 Presence of Peat in Sri Lanka and Associated Problems	1
1.2 Appropriate Ground Improvement Techniques for Peat Deposits	2
1.3 Objective of the project	3
1.4 Outline of the thesis	3
<b>2. Subsoil Condition at the Project Site</b>	<b>5</b>
1.1 Orientation of the Fill Area	5
2.2 Initial Subsoil Conditions	5
2.3 Initial Engineering Properties established through Insitu Tests	8
2.3.1 Data through Standard Penetration Test	8
2.3.2 Evaluation of subsoil condition through Vane Shear Test	12
2.4 Initial Engineering Properties established through laboratory tests	15
2.4.1 Stiffness Properties	15
2.4.2 Strength Properties	16
2.5 Concluding Comments	16
<b>3. Improvement achieved in the Engineering Properties -Evaluation Using Laboratory Parameters</b>	<b>18</b>
3.1 Laboratory Test Program	18
3.2 Simulated Testing	18
3.2.1 Improvement achieved in Primary Consolidation-Simulated Testing	18

3.2.2	Improvement achieved in Secondary Consolidation – Simulated Testing	19
3.2.3	Improvement achieved in Undrained Shear Strength – Simulated Testing	20
3.3	Comparing the behavior of samples tested before and after filling	23
3.3.1	Improvement achieved in Primary Consolidation parameters	23
3.3.2	Improvement achieved in Secondary Consolidation Characteristic	25
3.3.3	Observation on Undrained Shear Strength	26
3.4	Concluding Comment	26
<b>4.</b>	<b>Monitoring of Field Behavior</b>	<b>27</b>
4.1	Importance of Field Monitoring	27
4.2	Designs and Installation of Monitoring Scheme	27
4.2.1	Pore Pressure Measurement	30
4.2.2	Settlement Measurement	30
4.3	Fill Records	30
<b>5.</b>	<b>Modeling Field Behavior and Comparison with Actual Observations</b>	<b>34</b>
5.1	Introduction	34
5.2	Modeling of Field Behavior using the Finite Difference Method	35
5.2.1	Modeling the Pore Pressure Response	35
5.2.2	Modeling of the Settlement Behavior	38
5.3	Verification of Finite Difference Model	39
5.3.1	Verification of Finite Difference Model with Terzaghi Model for Instantaneous Loading	39
5.3.2	Verification of Finite Difference Method for Stage Loading	39

5.3.3	Verification of Finite Difference Method for Excess Pore Water Pressure Dissipation	41
5.4	Prediction of Excess Pore Water Pressure	42
5.5	Comparison of Pore Water Pressure Dissipation	42
5.6	Prediction of Settlement	47
5.7	Comparison of Predicted and Actual Settlements	47
5.7.1	Comparison of Predicted Settlement for Double drainage condition with actual settlement	49
5.7.2	Comparison of Predicted Settlement for Instantaneous Loading case with actual Settlement	50
5.8	Concluding Comments	51
<b>6.</b>	<b>Improvement of Shear Strength in the field and Comparison with laboratory observations.</b>	<b>52</b>
6.1	Improvement of Shear Strength – Evaluation through Field Vane Shear Test	52
6.2	Comparison with the Vane Shear data – After Filling	52
6.3	Comparison with Consolidated Undrained Test Results	54
<b>7.</b>	<b>Conclusions</b>	<b>55</b>
<b>8.</b>	<b>References</b>	<b>58</b>
 <b>Appendices</b>		
<b>Appendix 1 – Logs of Boreholes</b>		
<b>Appendix 2 – Vane Shear Test data – Before Filling</b>		

**Appendix 3 – Laboratory Test results – Before Filling**

**Appendix 4 – Laboratory Test results – After Filling**

**Appendix 5 – Field Monitoring Data**

**Appendix 6 – Vane Shear Test data – After Filling**

**Appendix 7 – Finite Difference Model- Spread Sheet**
