Enhanced Banknote Recognizer for Sri Lankan Currency

E.M.A. Ekanayake

149209H

Dissertation submitted to the Faculty of Information Technology,
University of Moratuwa, Sri Lanka for the partial fulfillment of the
requirements of the Degree of Master of Science in
Information Technology.

March 2018

Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education.

Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

Name of Student: E.M.A. Ekanayake

Signature:

Date:

Supervised by:

Name of Supervisor: Mr.Saminda Premaratne

Acknowledgement

I owe deep gratitude to my supervisor **Mr. Saminda Premaratne** for his guidance, meticulous attention and unstinted support given to me to drive my research towards success.

A big word of thanks goes to **Mr. Chaman Wijesiriwardana and Mr. B. H. Sudantha**, for being project coordinators, for giving valuable advices, for providing us with required knowledge and guidance in completing the research project.

My sincere thank goes to **Academic Staff in University of Moratuwa – Information Faculty** and **colleagues** of my Masters batch for their kind cooperation and friendship right throughout the course.

I wish to express my appreciation to my employer, **INOVA IT SYSTEMS (PVT) LTD** for having provided me a working atmosphere, conducive to proceed with my higher studies.

Finally, I am deeply indebted to my **Parents** and my **Husband** who have always been my most reliable source of inspiration.

Abstract

Automatic bank note recognition has been researched in many countries around the world in the recent past using many new technologies. It has various potential applications including electronic banking, currency monitoring applications, money exchange counters, super markets, rail way ticket counters, gas stations etc.

Many researches or developers have tried to come up with a global solution for this area of research. However, the accuracy of those solutions are tends to depend on the country's currency note characteristics and the identification depends mainly on the extraction of features. Hence, a generalized system is not applicable in every situation. Sri Lankan researches also have been tried implementing solution for Sri Lankan currency. Even though such systems are being used in banking sector in Sri Lanka, they have limitations and need improvements where researches have a space to give solutions. Therefore, the whole purpose of this research is to overcome the limitations and enhance the current automatic bank note recognition system. In addition, proposed system will perform a data analysis and give a recommendation to the Central Bank of Sri Lanka, about the usage of the currencies (money velocity).

Enhanced Banknote Recognizer for Sri Lankan Currency solution will be done for latest series of 'Development and Prosperity, and Sri Lankan Dancers' which released on 4th of February 2011. RBG value analysis, image processing, OCR and Data analysis will use to implement the proposed solution.
