## DECLARATION OF THE CANDIDATE AND SUPERVISOR

I certify that this thesis does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any university to the best of my knowledge and belief it does not contain any material previously published, written or orally communicated by another person or myself except where due reference is made in the text.

In addition, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Kavindra Perera

G.G.L.K Perera.

(MBA/IT/109071M)

Date: 30/04/2014

The above candidate has carried out research for the Masters/MPhil/PhD thesis/  
Dissertation under my supervision.

## ABSTRACT

IT industry is growing faster than ever. Furthermore, the IT industry is becoming more and more competitive. IT organizations are constantly looking to prospect and maintain employees with top quality. Unlike in any other industry, IT industry rely more on the knowledgeable employees. The impact of employee turnover on an organization is costly. Main reason for that is the cost of replacing the knowledge and experience of the employee.

The main objective of this study is to find out the factors, which leads Sri Lankan IT professionals to stay in their current organization. This study is extended to identify the effect on moderator variables on the relationship between the employee retention factors and the employee's intention to stay.

Quantitative research was carried out among 174 IT professionals in Sri Lankan large and medium scale IT organizations, whose designation is below the managerial position. Analysis confirmed that job security, organization culture, flexible working hours, involvement in decision making, supervisory support and compensation have positive relationship with employee retention. Furthermore, the analysis results showed that the moderator factors (age, gender and marital status) have an effect on the relationship between the job security, training and development, flexible working hours, supervisory support, performance appraisals and employee retention.

As per the findings of this study, HR managers should consider more on giving their employees flexible working hours, providing fair and understandable employee performance appraisals process. Even though this study did not resulted in direct relationship between the career development and employee's intention stay, the managers should provide the facilities to employee's career development. Managers should give a massive consideration for the employee's remuneration. In Sri Lankan context, with identifying above results, HR managers can do an analysis on a particular employee and identify the probability of that employee leaving the organization or retaining. That will be a key model for the HR managers to analyse the employees and come up with strategic plans to retain talented employees within the organization.

**Key words:** Employee retention factors, Sri Lanka IT industry, Moderator variables

## ACKNOWLEDGEMENTS

Many have helped me in making this research a success. Guidance and assistance given by my research supervisor Dr.Chandana Gamage is highly appreciated and I am extremely grateful for the support given by him during the research and academic period. I would like to express my gratitude to all the lecturers, academic and non-academic staff who helped me in numerous ways during the academic period.

I would specially like to thank all the IT professionals who helped me by filling questionnaires. Finally, I would like to thank my family members and friends for their patience, encouragement and assistance in making this research a reality.

Thank You.

Kavindra Perera.
