## DECLARATION

I declare that this is my own work and this dissertation does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

## ABSTRACT

In Sri Lanka net meter PV energy is popular in building sector and also it is promoted by the government. Every building owner would be like to have optimum energy design while minimizing the cost of energy when new buildings are at design stage. According to the 2014 Sri Lanka energy balance, the energy consumption of commercial buildings accounts for about 25% of energy. So it is important to optimize consumption of fossil fuels in the building sector in order to reduce greenhouse gas emissions.

Optimum net meter solar PV capacity to be installed is depend on various factor such as tariff category, solar irradiation, building load profile, maximum demand of the building etc. Thus it is essential do analysis to decide the PV system capacity. But this analysis is tedious to do without data and expertise knowledge on high end analysis software.

In this research, a methodology is proposed to develop an optimum energy solution tool using techno- economic analysis for building energy system with net metered solar PV in Sri Lanka which are differ from load profile, tariff Scheme and the maximum demand.

The software HOMER was used to model the energy system and the simulation is validated using two actual situations.

From this research intelligent tool is developed which is very easy to use by anyone without expertise knowledge or practice to select optimum solar PV capacity to be installed and get details on investment cost, cost of energy, payback period etc. If the user cannot go for the optimum PV capacity due to the limitations on cost or area, then this tool can be used select whatever the possible feasible capacity using this tool. This developed tool have been verified considering two actual situations.

Key words: PV capacity, load profile, tariff Scheme, maximum demand, investment cost, cost of energy, payback period

## ACKNOWLEDGEMENT

I would like to express my special thanks of gratitude to Dr. K.T.M. Udayanga Hemapala who encouraged and guided me to conduct this research and on perpetration of final dissertation.

I would like to take this opportunity to extend my sincere thanks to Head of the Department of Electrical Engineering and all the lectures and visiting lectures of the Department of Electrical Engineering for the support extended during the study period.

My sincere thank goes to Eng. MR Jeychandran; director general, Eng. G Bogahawaththa; former director general, Eng (Ms) EDMS Gunarathne; chief electrical engineer, my superiors and colleagues in department of buildings for their support and encouragement.

I extend my sincere gratitude to Mr. Kapila Gunasena,; GSMB, human resource manager; ELS Lanka (Pvt) ltd, Mr. Thilina Maduranga; GENSO power technologies (Pvt) ltd, Mr. Sampath Abeysekara; Hayleys Industrial Solutions (Pvt) Ltd, Mr. Harsha Fernando; Trade Promoters (Pvt) Ltd, Mr Dinesh; Winseth Solar (Pvt) ltd and Mr. Chamara Adhikari; BAM green (Pvt) ltd who spent their valuable time to provide me valuable information and data required for this study.

Further, I extend my sincere gratitude to NREL for providing the HOMER software update. My special thanks go to Ms. Kanchana Amarasekara, PhD student at University of Wollongong, Australia and Mr. Chandana Ruwan ; assistant lecturer at University of Peradeniya for providing valuable information required for this study.

It is also with great pleasure that I remember the encouragement and support extended by my mother and my husband. May be I could not have completed this research without their valuable support.
