Head
Department of Electronic &
Telecommunication Engineering
University of Moratuwa, Sri Lanka

Abstract

Today, broadband access is regarded as an essential factor for economic and competitive survival in the 21st century. The development of the importance of broadband technology can be likened to the ever-increasing importance of road or rail when they were developed. Most advanced economies went through a transition in the second half of the 20th century, of being production-driven to service-driven. Now, in the 21st century, these economies are rapidly transforming into more towards being information oriented and knowledge-driven economies. In such an environment, the skill, speed, and innovation needed to transform raw data into valuable knowledge and in turn, to use that knowledge with a profit motive is pivotal to international competitiveness [1]. By bringing the digital world literally to our doorstep, broadband would offer a tantalizing spectrum of benefits, such as, increased business productivity, improved healthcare, better education, interactive entertainment, and most importantly greater governmental efficiency.

It is a known fact that Sri Lanka has the most de-regulated telecom sector in the South Asian region [2]. However, the expected economic growth has not been achieved. Possible reasons for this could be the lack of an adequate backbone infrastructure, lack of willingness to share resources, wire line connectivity to the international Internet has not been de-monopolized and the other incumbent operators do not have sufficient resources to invest in under-served areas. As a result of these problems there exists a high digital divide in various parts of the country.

Therefore, it was considered worthwhile to investigate the potential causes and the long-term solutions for the above issues. The need of a research study was felt as highly necessary by the researcher. The study identifies the most potential candidates for the adoption of broadband. The provinces are considered as communities when identifying the most potential broadband candidates. The research study finally reveals that the Western Province as the chief broadband candidate. Next in line are the Southern Province and Central Province appearing consecutively. The least potential broadband candidate appears to be the Northern Province.

The researcher identifies some models which have been used in other countries and these models were analyzed in terms of local context to check the applicability of those models to our communities. Conclusively, the study suggests appropriate broadband models that should be adopted by the communities. A new model is introduced by the researcher to the Western Province named "Service Provider Model (SPM)". For the Southern and Central Provinces, "Passive Infrastructure Model (PIM)" was determined as the best model. For the North Western and Sabaragamuwa Provinces research study suggests implementation of the "Carriers Carrier Model (CCM)". These models will be useful for the introduction and use of broadband services in the identified communities.

The researcher further analyses the implementation of the PIM and suggests fiber as the most suitable backbone technology. The researcher recommends implementing fiber through the Railway line or Power Line. Also, in order to facilitate service providers to distribute broadband services to more under-served parts of the communities, the researcher suggests the usage of state lands through provincial councils. The report concludes by presenting several suggestions for the successful implementation of one of the recommended models.

Acknowledgements

First and foremost, I wish to express my sincere gratitude to my research supervisor, Mr. Kithsiri Samarasinghe the Head of the Department of Electronics & Telecommunications, University of Moratuwa. I am very much indebted to you sir, for all your assistance given to me during my research. I must admit that your advice as well as your criticism kept me on track and helped me immensely in achieving the research objectives.

The constant guidance and encouragement received from Mrs. Vishaka Nanayakkara, Head of the Department of Computer Science & Engineering at UOM, has been of great help in carrying out my research and is acknowledged with reverential thanks. Dr. Chatura Perera, my most heartfelt thanks for your tireless efforts as the MBA Coordinator. I would like to express a deep sense of gratitude and thank profusely Dr. P.M.C Thilakaratne, the HOD of Accountancy at University of Kelaniya for his valued advice given to me in the financial domain. To all the internal and external lecturers at UOM, I cannot thank you enough for being ever ready to not only share your expertise but also to spare precious time to help me throughout this MBA program.

This research study of the Telecommunications domain would never have become a reality, without the immense support of so many professionals practicing in this industry, who readily extended their fullest cooperation in providing me with the required information for my research. Here, I would like to convey special thanks to the following member at Lanka Bell (pvt) Ltd., Mr. N. Peiris, General Manager (Technical Operations), for the assistance and interest that you have shown towards my research study, Mr. S. Bartholomeuz, Senior Manager (Regulatory Affairs & Interconnections), for providing information relating to the regulations within the Telecommunication Industry, Mr. L. Dias and D. Dissanayaka, who gave up so much of their time to help me gather necessary research material.

I would like to express my gratitude to Mr. K.A Kapurubandara, Deputy General Manager (Switching Metro), Sri Lanka Telecom, for taking the time to share his

expertise despite his busy schedule. The valuable information provided by Mr S. Sadanayaka (Head of project section), and J. Abeysinghe, Deputy General Manager (Sales and Marketing) at SLT, and Mr C. Seneviratne, Manager ISP at Suntel (pvt) Ltd. is greatly acknowledged.

A special thanks to Mr. Radley Dissanayaka, Program Manager, ICTA, and a former member of the TRC, for his expert advice in regulatory aspects related to the industry. To Mr. Lalith Liyanage, Project Manager, Distant Education Modernization Project and Mr. Madura Liyanage, Technical Manager (School Net Project), Ministry of Education, a big thank you for providing me with needed information. Also I would like to express my gratitude to Mr. M. Wijeshantha, Electrical Engineer, Ceylon Electricity Board, for providing information relating to the CEB and Mr. H.A. Seneviratne for the information on the Provincial Councils.

Since I am a graduate in Information Systems, embarking on a research study within the Telecommunication domain was a new and exciting step for me. In this, I am ever grateful to the following personnel, who spent many hours helping me collect research material, patiently explained new terms and concepts, and for making this research study a joyous experience with the enthusiasm they showed: Mr. P. Samarasinghe, Deputy Chief Engineer (Signal and Telecommunication) Sri Lankan Railways, Mr. Mahasen, Alcatel, Mr A. Gunawardane, General Manager, Metropolitan (pvt) Ltd., and Mrs. A. Jayasekara, Deputy Director (Sample Survey Division), Census and Statistics Department.

On a more personal note, I am extremely indebted to my beloved parents, for being a constant source of inspiration, strength and encouragement. Thank you for the immeasurable support you have given me and for being a tower of strength not only during my research study but throughout my life. To my loving brother and sister-in-law Kanishka and Mano, thank you so much for being a support system I could always count on, and for motivating me to do my best in my chosen career. I also take this opportunity to convey my most sincere thanks to my best friend Nishala, for being with me in times of joy and sorrow and motivating me in every way throughout my research.

I am extremely grateful to Mr. R. Dharmendra for the valuable assistance given to me all through my MBA program. My special thanks to my Project Managers at Industrial & Financial Systems (pvt) Ltd., for being so helpful and allowing me to attend MBA lectures in time.

As the adage goes “Last but not Least”, I would like to thank all my colleagues who made every minute spent at the UOM, a memorable moment, unforgettable for many a life time.
