Smart Doorbell for Home Security using Raspberry Pi

Sahan Tharanga Lamaheva

158763B

Dissertation submitted to the Faculty of Information Technology, University of Moratuwa, Sri Lanka for the partial fulfillment of the requirements of the Honours Degree of Bachelor of Science in Information Technology.

February 2019

Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

Name of Student: Mr. S.T. Lamahewa

Signature of the Student: _____

Date:

Supervised by:

Name of the Supervisor: Mr. B.H. Sudantha

Dedication

I would dedicate this thesis to my beloved family members who have never failed to give me a tremendous support, for giving all not only throughout my project but also throughout my life as well. As well they teach me that even the largest task can be accomplished if it is done one step at a time,

Acknowledgement

I wish to express my eternally grateful and gratitude to my project supervisor Mr. B.H. Sudantha, Senior Lecturer, Faculty of Information Technology, University of Moratuwa untiringly shared his knowledge, precious guidance, encouragement, advices and help given to complete the project successfully. Also, I thank to Prof A.S. Karunananda who gave me guidance and advices to complete the project successfully. I am also grateful to previous researchers who have contributed to the domain of distributed applications, academic and non academic staff of Faculty of Information Technology, University of Moratuwa and also batch mates who have given me valuable feedbacks to improve the project.

Importantly I would like to thank my wife and my family members for the encouragement and undying support not only throughout my project but also throughout my life.

Finally, the support of University of Moratuwa is also sincerely acknowledged.

Abstract

In recent years, the crimes targeting household properties has grown considerably high. Therefore, it's necessary to come up with a proper solution to secure a household and to let house owners aware about the surrounding activities. The proposed system is a hardware device that combined with technologies like OpenCV deep learning based facial recognition and WebRTC. Further, PhoneGap is used to develop the application for hand-held devices which will interact with the client (house owner). To implement one-way video conferencing between the user (house owner) and visitor, WebRTC with Socket.io will be used. Apart from that, WebRTC with Socket.io combined technologies are responsible for streaming live feed of household environment. Motion detection and video capturing are done using PIR sensor, camera module, speaker and microphone. The system will initiate by turning on the camera when either a user presses on the doorbell 'bell' push button or PIR sensor detects motion. When the visitor presses the doorbell 'call' push button, visitor is connected to an one-way voice conference call with the home owner (House owner can see and hear the voice of the visitor through a hand-held device and visitor can only hear the voice of the owner through doorbell device.). Home owners can record a pre-defined message for known users as well. The camera module will perform facial detection by resolving a classifier in OpenCV. Afterwards, an image will be captured with a brief video. Facial information is saved in facial repository and video files are stored in the cloud. During the facial recognition if a match is found, the house owner will be notified with visitor details. For unknown users, house owner will be prompted to identify. The system can be improved and customized as a security system that can be installed in server rooms and also it can be enhanced to use as a student attendance recorder module.

Keywords – Raspberry Pi, WebRTC, PhoneGap, OpenCV

Table of Contents

Chapter 1 – Introduction	1
1.1. Prolegomena	1
1.2. Aim and Objectives.....	1
1.3. Background and Motivation	2
1.4. Problem in brief	3
1.5. Solution in brief	3
1.5.1. Users	3
1.5.2. Input	3
1.5.3. Output	3
1.5.4. Process	4
1.5.5. Technologies	4
1.5.6. Features	5
1.5.7. System Requirements.....	5
1.6. Summary	5
Chapter 2 – Current Issues in Home Security Devices	6
2.1. Introduction.....	6
2.2. Other solutions for home security	6
2.3. Summary	10
Chapter 3 – Technology Adapted	11
3.1. Introduction.....	11
3.2. Technologies	12
3.2.1. Raspberry Pi 3 B+ Model	12
3.2.2. Apache Cordova (PhoneGap)	13
3.2.3. Face Recognition with Deep Learning.....	13
3.2.4. WebRTC	14
3.2.5. WebSockets.....	14
3.2.6. Python	14
3.2.7. Node.js	14
Chapter 4 – Using Raspberry Pi for Home Security	15
4.1. Introduction.....	15
4.2. Input	15
4.3. Output	15

4.4.	Process	16
4.5.	Users	18
4.6.	Features	18
4.7.	Summary	18
Chapter 5 – Analysis and Design.....		19
5.1.	Introduction.....	19
5.2.	Smart Doorbell Architecture.....	19
5.3.	PIR Sensor and push buttons signal handler module	20
5.4.	Face detection and face recognition module.....	20
5.5.	Image archive module.....	21
5.6.	WebRTC module	21
5.7.	Notification module	21
5.8.	Web and signalling server.....	21
5.9.	Client Application.....	21
5.10.	Summary	22
Chapter 6 – Implementation.....		23
6.1.	Introduction.....	23
6.2.	Implementation of PIR Sensor and push buttons signal handler module	23
6.2.1.	PIR Sensor	23
6.2.2.	Push buttons (Tactile switch).....	25
6.3.	Implementation of face detection and face recognition module	25
6.3.1.	Locating visitor’s face.....	26
6.3.2.	Encoding faces	27
6.3.3.	Finding the visitor’s name from the encoding	27
6.4.	Image archive module.....	28
6.5.	WebRTC module	29
6.5.1.	One-way video conference.....	30
6.5.2.	Video Live Streaming	34
6.6.	Notification module	35
6.7.	Signaling Server.....	35
6.8.	Client App (House Owner’s app).....	35
6.9.	Summary	35
Chapter 7 – Evaluation.....		36
7.1.	Introduction.....	36

7.2. Functional testing.....	36
7.2.1. Facial detection & recognition.....	36
7.2.2. WebRTC one-way video conference call	59
7.3. Summary	60
8.1. Introduction.....	62
8.2. Discussion.....	62
8.3. Limitations	64
8.3. Future Development.....	64
8.4. Summary	64
