Detecting Clone Profiles in Social Media Networks

C. R. Liyanage

169318J

Dissertation submitted to the Faculty of Information Technology, University of
Moratuwa, Sri Lanka for the partial fulfillment of the requirements of Degree of
Master of Science in Information Technology

February 2019

Declaration

I declare that this thesis is my own work and has not been submitted in any form for another degree or diploma at any university or other institution of tertiary education. Information derived from the published or unpublished work of others has been acknowledged in the text and a list of references is given.

Date:

Acknowledgement

I wish to express sincere appreciation to,

My research supervisor, Mr. S. C. Premarathne for dedicating his valuable time for guiding me throughout this.

My husband and parents for providing me with continuous encouragement throughout my years of study.

Finally, for my colleagues for their cooperation and support.

Thank you.

Abstract

With the popularity of Online Social Networks (OSN), the number of different types of digital attacks has been increased causing lots of damages to their users. Identity Clone Attack (ICA) is one of the leading among them which illegally uses the information of a genuine user by duplicating them in another fake profile. These attacks severely affect a true and innocent identity since it can be misused by another malicious profile. Hence these clone profiles need to be identified and removed in order to increase the protection of users. Many researchers have tried to solve the problem of clone profiles in OSN, however more robust solutions are still to be taken. This study introduces a model to detect clone profiles on Facebook by clustering based on weighted categorical attributes and estimating the strength of friend relationship among friends. The list of possible clones with the amount of clone percentages to a given victim profile was presented as the output of the model. With the use of Agglomerative hierarchical clustering algorithm and Jaccard similarity measurement, a low average within cluster distance and a precision of 88.75% has shown in the results

Table of Content

CHAPTER 1	1
INTRODUCTION TO FAKE AND CLONE PROFILES	1
1.1. Introduction to the background.....	1
1.2. Profile Cloning Environment.....	1
1.3. A brief from previous work	3
1.4. Problem Statement	3
1.5. Aim and Objectives	3
1.6. Research Process, Inputs, Outputs and Beneficiaries in brief	4
1.7. Summary of the first chapter and heading to next chapters	4
CHAPTER 2	5
CURRENT STATE OF DETECTING DUPLICATE PROFILES IN OSN.....	5
2.1. Introduction to the background.....	5
2.2. Current Situation.....	6
2.3. Platform Selection	6
2.4. Data Collection	6
2.5. Existing Approaches.....	7
2.5.1. Using Classification Algorithms.....	7
2.5.2. Social Graph based approach.....	8
2.5.3. Matching similarity attributes	9
2.5.4. Analyzing user behavior changes	10
2.5.5. Validation.....	11
CHAPTER 3	12
TECHNOLOGIES USED FOR CLONE DETECTION PROCESS	12
3.1. MySQL	12
3.2. Java	12
3.3. RapidMiner Studio9.1	12
3.4. Datamining through Clustering	13
3.5. Similarity measurement algorithms.....	14
3.6. Hardware environment	14
3.7. Advanced Data Generator	14

CHAPTER 4	15
A NOVEL APPROACH FOR DUPLICATE PROFILE DETECTION	15
4.1. Introduction	15
4.2. Inputs to the model	15
4.3. Outputs from the.....	15
4.4. Process in brief	15
4.5. Platform Selection	16
4.6. Data Collection.....	16
4.8. Performing clustering	17
CHAPTER 5	18
CLONE PROFILE DETECTION - ANALYSIS & DESIGN	18
5.1. Introduction	18
5.2. Overview of the Proposed Model Design.....	18
5.3. Attribute feature selection	19
5.4. Artificial Clone Profile Set Generation	21
5.5. Filter candidates by name	21
5.6. Clustering based on attribute features	21
5.7. Network Similarity Calculation.....	23
5.7.1 Friend Network	25
5.7.2 Recommended friend network.....	26
5.7.3 Aggregate Friend Network Similarity	27
5.8. Profile Similarity Threshold Calculation and Clone Detection.....	27
5.9. Result Validation	28
CHAPTER 6	30
IMPLEMENTATION OF THE CLONE PROFILE DETECTION MODEL.....	30
6.1. Introduction	30
6.2. Data Preprocessing	30
6.2.1. Friend Network dataset.....	30
6.2.2. Attribute feature dataset.....	31
6.3. Recommended friend list generation	32
6.4. The Model.....	33
6.5. Detection Phase 1 – Filter by Names.....	33

6.6.	Detection Phase 2 – Clustering on categorical data	34
6.7.	Detection Phase 3 – Friend Network Similarity Calculation	36
6.8.	Calculating the similarity threshold value	37
6.9.	Testing Phase	37
CHAPTER 7	38
RESULTS EVALUATION & DISCUSSION ON WORK	38
7.1.	Introduction	38
7.2.	Clustering as a supervise method	38
7.3.	Network Similarity performance evaluation	42
7.4.	The Results Validation	44
CHAPTER 8	46
CONCLUSION & FUTURE WORK	46
8.1.	Introduction	46
8.2.	Challenges to the field of research	46
8.3.	Challenges to the proposed model.....	47
8.4.	How this study can be modified in future.....	48
8.5.	Conclusion.....	49
