C.P.C Oil Refinery

Sapugaskanda - Kelaniya

## ABSTRACT

In a refinery the choice of a suitable crude oil slate is probably one of the most difficult problem that refiners have to resolve. The process of making the best choice includes the whole series of successive decisions to purchase different crude oils that refinery will process and globally which will generate the best economic results.

There are mainly three types of crude oil which are being imported to the country. They are Iranian light (from Iran), Arabian light (from Saudi Arabia) and Miri light (from Malaysia). Two types of crude were considered in this study for estimation of the product key properties and the refinery margin (Economical evaluation). Estimation of the yield and key properties were done using standard data and actual data used in the Refinery. Also the standard assay data from crude assay books were used.

This study was carried out in two types of analysis first an economic evaluation which was done by comparing value of selected crude mixes against the value of the products and Crude. Average product prices were obtained from daily Platt's Singapore price data available in the refinery and Crude prices were actual. Crude mix having Iranian Light crude oil and Miri Light crude in different wt % were analyzed. The study showed that with the increase of Miri Light crude, net profit or the margin decreases. As the second part of the study, the evaluation of the properties of the products which were obtained from same crude mixes were

analyzed and checked for the standard specifications. However with this study, it was found out that some specifications are going off while increasing the Miri crude percentage over 27 percent.

The study carried out indicated that it would be able to produce required quality products by blending Miri light crude up to 27 percent in the mixture meeting the required specifications but never profitable. It was concluded that Miri crude oil should not be processed in the refinery due to high price and also limiting the specification at certain percentage. Finally the methodology was developed to a model which can be used to evaluate any crude oil for properties and profit provided the assay data given. The evaluation model should be developed to a Linear Programming model (LP Model ) or simulation module for evaluating crude oil as

in world Refineries. University of Moratuwa, Sri Lanka.

## ACKNOWLEDGEMENT

From the very beginning I would like to offer my grateful thanks Dr. A.D.U.S. Amarasingha, Senior Lecturer, Department of Chemical and Process Engineering University of Moratuwa ,Who guided and supervised me as my supervisor an excellent way throughout research. When making the project proposal he gave tremendous support and he has been so kind sacrifice his valuable time for this project. It was great pleasure to be able to work under him to make this project success. Then I would like to offer my special and sincere thanks to Eng. Mr. E.A.S. Edirisinghe Chartered Engineer, Acting Operation Manager Department of Manufacturing and Operations Ceylon Petroleum Corporation (Refinery) who guided me in all respect been my co supervisor giving valuable comments and suggestions for selecting ,writing and greate assistant in completion of this project.

Also I offer my thanks to Dr. Suren Wijekoon as the Project Co-ordinator and Dr. Shantha walpolage, Senior lecturer, Department of Chemical and Process Engineering University of Moratuwa ,for all the encouragement given me and all the lecturers of the Department of Chemical and Process Engineering who helped me in various ways to complete this successfully.

And also I remember my beloved mother recently passed away for blessings and courage given at all times.

Abstract	i
Acknowledgement	ii
Contents	iii
List of tables	iv
List of figures	v
<b>1. Chapter 1. Introduction</b>	
1.1 Introduction	1
1.2 Identification of the problem	3
1.3 Scope	5
1.4 Objective	6
<b>2. Chapter 2. Introduction to the Refinery of Ceylon Petroleum Corporation</b>	
2.1 Brief history of the Refinery Project	7
2.2 Refinery Process and Process units	9
2.2.1 Crude distiller unit	10
2.2.2 Naphtha Unifiner unit (02 unit)	11
2.2.3 Platformer unit (03 unit)	12
2.2.4 Visbreaker unit (05 unit)	12
2.2.5 LPG Merox unit (06 unit)	13
2.2.6 Gas oil hydrotreaters (04 and 07 units)	13

2.2.7	Vacuum distillation unit (08 unit)	13
2.2.8	Bitumen blowing unit (09 unit)	14
2.2.9	De-propaniser unit (13 unit)	14
2.2.10	Kero Merox unit (15 unit)	15
2.3	Major Refinery products	15
2.3.1	Gasoline	17
2.3.2	Kerosene	17
2.3.3	Liquefied Petroleum Gas (LPG)	17
2.3.4	Diesel Fuels	18
2.3.5	Residual Fuels	18
2.3.6	Asphalt	18
2.3.7	Solvent (SBP)	19
2.3.8	Petrochemicals	19
2.3.9	Lubricants	19

### 3. Chapter 3. Literature Review

3.1	Basic refinery process- Description and History	21
3.2	Distillation Processes	22
3.2.1	Thermal Cracking Processes	22
3.2.2	Catalytic Processes	22
3.2.3	Treatment Processes	22
3.2	Crude oil Pricing	23
3.2.1	Introduction	23

3.2.2 Pricing methods	25
3.2.2.1 Crude oil price setting	26
3.2.2.2 Product Price Setting	26
3.2.2.3 Methods of Trading on the Oil Market	28
(a) Barter Agreements	28
(b) Single Cargo sales	28
(c) Spot market (Brent, WTI, Oman/Dubai)	28
(d) Future markets	32
(e) Future contracts	34
(f) Long Term Contracts	34
3.2.3 Modeling of Pricing	35
3.2.3.1 Introduction	35
(a) Indexing pricing	36
(b) Pricing formula applied to Arabian light, Iranian Light like for Europe crude	37
(c) Pricing formula applied to Arabian light, Iranian Light like For far Eastern crude	37
(d) Product price Formular	38
3.2.3.2 Factors that affect crude pricing	38
3.2.3.3 Crude oil and finished product prices using CPC	41
(a) Crude price	41

(b) Product prices	42

## **5. Chapter 5. Methodology**

5.1	Introduction	62
5.2	Estimation of TBP	65
5.3	Estimation of Yields	67
5.3.1	Evaluation of Product Yield	69
5.3.2	Refinery Material Balance	74
5.3.3	Product Blending to meet critical properties	84
5.3.3.1	Gasoline Blending	85
5.3.3.2	Auto Diesel Blending	86
5.3.3.3	Fuel oil Blending	88

5.4	Estimation of Product properties	91
5.4.1	Key properties for single Crude Oil	91
5.4.1.1	Specific Gravity (SG) and API Gravity	93
5.4.1.2	Boiling Point	95
5.4.1.3	Characterization Factor	95
5.4.1.4	Sulphur content	96
5.4.1.5	Aniline Point	96
5.4.1.6	Cetane Index	97
5.4.1.7	Smoke Point	98
5.4.1.8	Freeze Point	99
5.4.1.9	Pour Point	100
5.4.2	Specification (Standard CPC product key Properties)	103
5.5	Estimation of profit	104

## **6. Chapter 6. Results and discussion**

6.1	Introduction	111
6.2	Estimation of properties of finished products obtained from different % of Miri Light Crude in the mixture	113
6.2.1	Key Properties of Kerosene	114
6.2.2.	Key Properties of Diesel	119
6.2.3	Key Properties of Long residue	124
6.3	Estimation of Profit (Economic evaluation of Refinery	

products with different percentages of Mir light Crude in feed stock)	129
<b>7. Chapter 7. Conclusion and Future work</b>	<b>135</b>
