## DECLARATION

The work submitted in this dissertation is the result of my own investigation, except where otherwise stated.

It has not already been accepted for any degree, and is also not being concurrently submitted for any other degree.

List of Figures.....	vi
List of Tables.....	vii
Chapter 1 Introduction.....	1
1.1 Background.....	1
1.2 Fault Identification in Electric Power Networks.....	1
1.3 Distance Protection Scheme.....	2
1.4 Problems associated with Distance relay Applications.....	3
1.4.1 Minimum voltage at relay terminals.....	3
1.4.2 Under-reach and over-reach effect of remote infeed.....	3
1.4.3 Minimum Length of Line.....	3
1.4.4 Power swing blocking.....	4
1.5 Available Approaches for Automated Fault location in Power Networks.....	4
1.5.1 Impedance based fault location techniques.....	4
1.5.2 Knowledge based techniques.....	5
1.5.3 Travelling wave based methods.....	5
1.5.4 Methods based on integration of disturbance fault recorder data with network topology characteristics.....	6
1.6 Proposed Research Work.....	6
1.7 Objectives of the Research.....	7
Chapter 2 Project Overview.....	8
2.1 Scope of the project.....	8
2.2 Fault Transient Analysis using Wavelet Transformation.....	9
2.3 Modal Measurements for Fault characterization.....	10
2.4 Fault simulation work and fault location algorithm.....	11
Chapter 3 Methodology.....	13
3.1 Travelling Wave Behaviour of Fault Transients.....	13

3.2 Modal Decomposition of faulted signals.....	14
3.2.1 Appropriate mode selection according to fault type.....	16
3.3 Wavelet Transformation (WT) .....	16
3.3.1 Continuous Wavelet Transformation (CWT).....	16
3.3.2 Discrete Wavelet Transformation (DWT).....	17
3.3.3 Wavelets for Power System Transient analysis.....	18
3.3.4 Selection of Mother Wavelet for fault transient analysis .....	19
Chapter 4 System Modeling.....	22
4.1 Fault Identification in Electric Power networks .....	22
4.1.1 Surge impedance and velocity of propagation.....	22
4.1.2 Fault location approach.....	25
4.2 Fault location algorithm.....	31
4.2.1 Modified fault location algorithm for a branched network .....	34
4.3 Simulations .....	36
4.3.1 Feeders.....	39
4.3.2 Discrete wavelet filter bank.....	40
Chapter 5 Results.....	40
5.1 Modal Analysis.....	42
5.2 Fault distance calculation .....	44
Chapter 6 Conclusion.....	49
References.....	51
Appendix i.....	54
Appendix ii.....	56
Appendix iii.....	57

## Abstract

Determination of fault location in electric power systems is very vital for economic operation of power systems. Conventional distance protection schemes provide sufficient information for fault isolation and those are not satisfactory for accurate fault location and identification. This study focuses on developing an observer model for the distance relay through fault transient analysis which provides more useful information related to fault localization.

Using the theory of wavelet singularity detection as a powerful signal processing tool, travelling wave behavior of faulted signals is investigated to build up the fault location algorithm. Fault transients are discriminated from other types of power system transients using Daubechies-4 mother wavelet. The principle of proposed scheme is based on the identification of successive high frequency voltage waves arriving at the substation end in modal domain. Clarke transformation matrix is used to obtain modal quantities which eliminate significant electromagnetic coupling between three phase quantities.

The resulted fault transient voltage graph provides basic information for fault distance calculation with the help of power network's physical characteristics. Surges originated from different discontinuity points of the network including the fault point are analyzed by their magnitude, polarity and timing to incorporate them into the proposed fault location technique. New scheme is capable of locating faults irrespective of fault types, once the appropriate mode is selected from the modal domain. Fault characterization by modal analysis is based on the trial and error approach at the time of fault simulation.

Extensive simulation studies carried out using MATLAB/SIMULINK Simpower control block set show that the proposed algorithm provides an accepted degree of accuracy in fault location under different conditions and validity of proposed technique to a branched network is also investigated during the study.

## Acknowledgement

It is a great pleasure to express gratitude to those who were behind me in completing my project successfully.

Thanks are due first to my supervisor, Dr. Narendra De Silva, for his great insights, perspectives and guidance and to Dr. Sarath Perera, university of Wollongong for giving me this valuable research topic. At the same time, my sincere thanks also go to Dr. J P Karunadasa for helping in various ways to clarify the things related to my academic works in time with excellent cooperation and guidance.

I would like to extend my sincere gratitude to my colleagues in transmission planning division and distribution branches in Ceylon Electricity board for providing necessary data for this research.

Finally I would be thankful to the Department of Electrical Engineering and the Post Graduate Office, Faculty of Engineering, University of Moratuwa, for their support during the study period.
