ABSTRACT

This document presents a study on the selection of software for government sector enterprise applications. Many factors could influence the choice of software in government sector enterprise applications. The research is based on the following problem: what factors influence the choice of software for government sector enterprise applications, in the Sri Lankan context.

Information systems (IS) projects in several selected government sector organizations have been studied in depth during the course of the research. Around 30% of the investigated government sector information systems projects have been found to have used FOSS. Several factors have been identified to have affected the choice of software for government sector enterprise IS. Out of these, technical compliance, cost, bidders/developers expertise and maintenance/support options were some of the most commonly indicated factors. Cost was highlighted as an important factor in a majority of the investigated IS. However, the analysis revealed that cost did not influence the choice between FOSS and proprietary software, when implementing the IS. This was quite unusual given the common perception that FOSS is used to lower costs. It was concluded from the analysis that certain other factors including bidders/developers expertise, technical compatibility with legacy proprietary systems and maintenance/support options override the cost factor, when selecting software.

Based on the analysis and conclusions, several recommendations have been made to leverage on the benefits of FOSS in government sector enterprise IS. These recommendations include ways to achieve cost advantages, especially in large scale replication. It is recommended to nurture a FOSS ecosystem and to develop internal FOSS expertise within government organizations, in order to leverage on the advantages of FOSS in government sector enterprise IS.

Keywords: Enterprise Software, Government, Free and Open Source Software, Software Adoption.

ACKNOWLEDGEMENT

I would like to extend my heartfelt gratitude to my supervisor, Professor Gihan Dias for his invaluable guidance and constant encouragement. I would also like to thank Mrs Vishaka Nanayakkara and Dr Chandana Gamage for their guidance and advice.

This research would not have been possible if not for the sincere help of Mr. Wasantha Deshapriya , the staff at the ICT Agency and government organizations. I wish to thank them for spending their valuable time in order to make this research a success.

Finally I wish to thank my parents and family for their constant encouragement. I would especially like to thank my wife Nirasha, for bearing up with me and constantly encouraging me.

TABLE OF CONTENTS

DECLARATION	iii
ABSTRACT	iv
ACKNOWLEDGEMENT	v
Chapter 1: INTRODUCTION	1
1.1 Background of the study	1
1.1.1 Free and Open Source Software (FOSS)	1
1.2 The research problem	2
1.3 Research objectives	3
1.4 Significance of the study	3
1.5 Research methodology	3
1.6 Scope of the study	4
1.7 Data collection	4
1.8 Data analysis	4
1.9 Nature and form of results	4
1.10 Structure of this document	4
Chapter 2: LITERATURE REVIEW	6
2.1 Success in Enterprise Systems	6
2.1.1 The DeLone and McLean Model	6
2.1.2 Enterprise Success Model	7
2.2 Use of FOSS in the Government Sector	9
2.2.1 Cost Savings	9
2.2.2 Security, stability and privacy	9
2.2.3 Independence	9
2.2.4 Helping domestic industries	9

2.2.5	Innovation	10
2.3	Open Source Adoption	10
2.3.1	Policies	11
2.3.2	Choice set	12
2.3.3	Selection	12
2.3.4	Other Adoption factors	13
Chapter 3:	RESEARCH METHODOLOGY AND DESIGN	14
3.1	Scope of the research	14
3.2	Research strategy and approach	14
3.3	Interview Design	14
3.3.1	A general investigation	15
3.3.2	Technology and Components	15
3.3.3	Specification development and selection	15
3.3.4	Factors affecting the selection	15
3.3.5	Issues, improvements and FOSS	15
Chapter 4:	RESEARCH FINDINGS	17
4.1	Spread of the investigated projects	17
4.1.1	Implementation stage of the project	18
4.1.2	ICTA guided and non-ICTA projects	19
4.1.3	The use of FOSS/ Proprietary software in the project	19
4.1.4	Nature of Specifications Development and Implementation	20
4.2	Factor identification	21
Chapter 5:	ANALYSIS AND CONCLUSIONS	24
5.1	Technical compliance	25
5.2	Cost	26

5.2.1	Total cost vs. the cost of the IS component	27
5.2.2	Compliance with existing technology	28
5.2.3	Use of unlicensed proprietary software	28
5.2.4	Conclusions	29
5.2.5	Methods of highlighting the cost as an important factor	29
5.3	Bidder/developer expertise	29
5.3.1	GIC Project	30
5.3.2	Internally developed system	31
5.3.3	Conclusions	31
5.4	Support and maintenance	32
5.4.1	Statistical perspective	32
5.4.2	A different scenario	33
5.4.3	Conclusion	33
5.5	Factor summary	33
5.6	Analysis based on specification development and implementation methodology	34
5.6.1	ICTA/SAGE	35
5.6.2	External consultant	37
5.6.3	Developed in-house	37
5.6.4	PPP	38
5.6.5	Summary of analysis by specifications development and implementation	38
Chapter 6:	RECOMMENDATIONS	40
6.1	Recommendations on building expertise	40
6.2	Recommendations on developing internal expertise	40
6.2.1	Knowledge sharing	41

6.3	Technical compatibility with legacy systems	41
6.4	Recommendations on developing specifications	41
6.5	Concluding remarks	42
