Thesis submitted in partial fulfillment of the requirements for the degree Master
of Engineering in Foundation Engineering and Earth Retaining Systems

Department of Civil Engineering

University of Moratuwa

Sri Lanka

May 2021

Statement of Authentication

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Name of the candidate: K.K.W. Premathilaka

Signature of the candidate:

Date:

The above candidate has carried out research for the Master thesis under my supervision.

Signature of the supervisor:

Date:

Prof. H. S. Thilakasiri
B.Sc. Eng (Civil), MSc (Lond), DIC, PhD (USA), C.Eng, FIE (SL)
Dean, Faculty of Engineering,
Sri Lanka Institute of Information Technology, Sri Lanka.

Signature of the supervisor:

Date:

Dr.L.I.N. De Silva
B.Sc. Eng (Moratuwa), M.Eng (Tokyo), Ph.D. (Tokyo)
Senior Lecturer, Department of Civil Engineering,
University of Moratuwa

Abstract

Undrained shear strength is one of the essential parameters in most of the applications of geotechnical engineering. Unconsolidated undrained (UU) triaxial test is the most commonly practiced method of determining the undrained shear strength which takes a considerable time and effort to produce its results, since the sampling stage. Such correlations seldom exist pertinent to Sri Lankan soils. Hence, it is important to have reliable correlations between easily executable, commonly used test results and undrained shear strength of Sri Lankan soils to easily and promptly predict the soil structure interaction phenomenon, especially in local geotechnical engineering applications.

Thus, in this study, an attempt has been made to correlate the standard penetration test (SPT) with experimentally determined unconsolidated undrained triaxial test parameters, and the undrained shear strength estimated from the field vane shear test data. This analysis consists of three main stages, namely analysis of the available correlations, analysis of the available data set based on the soil and sampling properties to develop a correlation and the analysis on a set of reliable data with a defined deviation factor.

A correlation between SPT N_{60} and undrained shear strength has been proposed for Sri Lankan silty soils. Further, possible analysis methods for developing correlations for other different soil types have also been addressed. In addition, existing drawbacks and difficulties associated with developing such correlations related to Sri Lankan context are also described.

Key words: *Undrained Shear Strength, Standard Penetration Test, Fine grained Soils, Correlations, Sri Lanka*

Acknowledgement

Successful completion of this thesis could not become a reality without the support I have received from many parties, and I make this my opportunity to convey my sincere gratitude to them.

First and foremost, I would like to acknowledge my principal supervisor, Prof. H.S. Thilakasiri, Dean Faculty of Engineering, SLIIT, for his guidance, encouragement and facilities provided throughout for the successful completion of this work.

Also I would like to thank my co-supervisor Dr. L.I.N. de Silva for the support provided for the coordination with Department of Civil Engineering, University of Moratuwa, for my research works.

My special thanks go to Prof. S.A.S. Kulathilaka, Prof. U.P. Nawagamuwa and all the lecturers of the M.Eng Foundation Engineering and Earth Retaining Systems programme and staff of the geotechnical engineering division of Department of Civil Engineering, University of Moratuwa, for their assistance during my research period.

Next, I would like to thank for the support provided by the Eng. (Mrs.) S. Senadheera, the General Manager of SLLDC, Eng. C.B. Amarasinghe, Additional General Manager (Implementation) and all the staff members of the Engineering Materials Testing Laboratory of SLLDC for the successful completion of this research.

Further, I would like to thank my parents, sister and friends who were there for me when I required them most and encourage me for the successful completion of this thesis.

Last but not least, I would like to convey my gratitude for my wife and kids for understanding me and the encouragement provided to complete this work, support provided to balance out the family and professional responsibilities, and studies, and for cheer me up when it is most required during this entire period.

<i>Figure II-9</i> : Cu (Triaxial) Vs Cu (Energy / N_{60}) by Décourt, 1990.....	77
<i>Figure II-10</i> : Cu (FVST) Vs Cu (Energy / N_{60}) by Décourt, 1990.....	78
<i>Figure II-11</i> : Cu (Triaxial) Vs Cu (Energy / N_{60}) by Terzaghi & Peck, 1967.....	79
<i>Figure II-12</i> : Cu (FVST) Vs Cu (Energy / N_{60}) by Terzaghi & Peck, 1967	79
<i>Figure II-13</i> : Cu (Triaxial) Vs Cu (Energy / N_f) by Terzaghi & Peck, 1967	80
<i>Figure II-14</i> : Cu (FVST) Vs Cu (Energy / N_f) by Terzaghi & Peck, 1967	80
<i>Figure II-15</i> : Cu (Triaxial) Vs Cu (Energy / N_f) by Sowers, 1979.....	81
<i>Figure II-16</i> : Cu (FVST) Vs Cu (Energy / N_f) by Sowers, 1979.....	82
<i>Figure II-17</i> : Cu (Triaxial) Vs Cu (Energy / N_{field}) by Sivikaya & Togrol, 2007	82
<i>Figure II-18</i> : Cu (FVST) Vs Cu (Energy / N_{field}) by Sivikaya & Togrol, 2007	83
<i>Figure II-19</i> : Cu (Triaxial) Vs Cu (Energy / N_{field}) by Décourt, 1990.....	84
<i>Figure II-20</i> : Cu (FVST) Vs Cu (Energy / N_{field}) by Décourt, 1990.....	84
<i>Figure III-1</i> : SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (Complete Set)	86
<i>Figure III-2</i> : SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (Complete Set)	87
<i>Figure III-3</i> : SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (Complete Set)	88
<i>Figure III-4</i> : SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on LL).....	88
<i>Figure III-5</i> : SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on LL).....	89
<i>Figure III-6</i> : SPT N_f Vs Undrained Shear Strength by Triaxial UU Tests (based on LL).....	90
<i>Figure III-7</i> : C_u /SPT N Ratio against Liquid Limit.	91
<i>Figure III-8</i> : SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on PL).....	91
<i>Figure III-9</i> : SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on PL).....	92
<i>Figure III-10</i> : SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on PL).....	93

<i>Figure III-11: C_u/SPT N Ratio against Plastic Limit</i>	94
<i>Figure III-12: SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on PI)</i>	94
<i>Figure III-13: SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on PI)</i>	95
<i>Figure III-14: SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on PI)</i>	96
<i>Figure III-15: C_u/SPT N Ratio against Plasticity Index</i>	97
<i>Figure III-16: SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on FC)</i>	98
<i>Figure III-17: SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on FC)</i>	98
<i>Figure III-18: SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on FC)</i>	99
<i>Figure III-19: C_u/SPT N Ratio against Fines Content</i>	100
<i>Figure III-20: SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on Clay Content)</i>	101
<i>Figure III-21: SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on Clay Content)</i>	101
<i>Figure III-22: SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on CC)</i>	102
<i>Figure III-23: C_u/SPT N Ratio against Clay Content</i>	103
<i>Figure III-24: SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on Sampling Depth)</i>	104
<i>Figure III-25: SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on Sampling Depth)</i>	105
<i>Figure III-26: SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on Sampling Depth)</i>	105
<i>Figure III-27: C_u/SPT N Ratio against Sampling Depth</i>	106
<i>Figure III-28: SPT N'_{70} Vs Undrained Shear Strength by Triaxial UU Tests (based on USCS)</i>	107

<i>Figure III-29: SPT N_{60} Vs Undrained Shear Strength by Triaxial UU Tests (based on USCS)</i>	108
<i>Figure III-30: SPT N_{field} Vs Undrained Shear Strength by Triaxial UU Tests (based on USCS)</i>	108
<i>Figure IV-1: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (Complete Set)</i>	110
<i>Figure IV-2: SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (Complete Set)</i>	111
<i>Figure IV-3: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (Complete Set)</i>	112
<i>Figure IV-4: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on LL)</i>	112
<i>Figure IV-5: SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on LL)</i>	113
<i>Figure IV-6: SPT N_f Vs Undrained Shear Strength by Field Vane Shear Tests (based on LL)</i>	114
<i>Figure IV-7: C_u/SPT N Ratio against Liquid Limit.</i>	115
<i>Figure IV-8: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PL)</i>	115
<i>Figure IV-9: SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PL)</i>	116
<i>Figure IV-10: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PL)</i>	117
<i>Figure IV-11: C_u/SPT N Ratio against Plastic Limit.</i>	118
<i>Figure IV-12: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PI)</i>	118
<i>Figure IV-13: SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PI)</i>	119
<i>Figure IV-14: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on PI)</i>	120
<i>Figure IV-15: C_u/SPT N Ratio against Plasticity Index.</i>	121

<i>Figure IV-16: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Fines Content).....</i>	121
<i>Figure IV-17: SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Fines Content).....</i>	122
<i>Figure IV-18: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Fines Content).....</i>	123
<i>Figure IV-19 : $C_u/SPT N$ Ratio against Fines Content.</i>	124
<i>Figure IV-20 SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Clay Content).....</i>	125
<i>Figure IV-21 : SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Clay Content).....</i>	125
<i>Figure IV-22: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Clay Content).....</i>	126
<i>Figure IV-23 $C_u/SPT N$ Ratio against Clay Content.....</i>	127
<i>Figure IV-24: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Sampling Depth).....</i>	128
<i>Figure IV-25 : SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Sampling Depth).....</i>	128
<i>Figure IV-26 : SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on Sampling Depth).....</i>	129
<i>Figure IV-27 $C_u/SPT N$ Ratio against Sampling Depth.</i>	130
<i>Figure IV-28: SPT N'_{70} Vs Undrained Shear Strength by Field Vane Shear Tests (based on USCS).....</i>	131
<i>Figure IV-29 : SPT N_{60} Vs Undrained Shear Strength by Field Vane Shear Tests (based on USCS).....</i>	132
<i>Figure IV-30: SPT N_{field} Vs Undrained Shear Strength by Field Vane Shear Tests (based on USCS).....</i>	132
