DECLARATION

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

.....

R. L. Wanniarachchi.

(Signature of the candidate)

Date:

The above candidate has carried out research for the Masters thesis under my supervision.

.....

.....

Dr. Shantha Fernando

Date

COPYRIGHT STATEMENT

I hereby grant the University of Moratuwa the right to archive and to make available my thesis or dissertation in whole or part in the University Libraries in all forms of media, subject to the provisions of the current copyright act of Sri Lanka. I retain all proprietary rights, such as patent rights. I also retain the right to use in future works (such as articles or books) all or part of this thesis or dissertation.

ABSTRACT

Software Engineering has become one of the essential requirements for today's business, and software development has become one of the trending employments today. Due to the business's technical advancement and competition, the IT industry's expectation of software development skill level increases. Therefore, the industry is looking for more qualified software developers even though software developers are available. Some companies arrange technical improvement training or/and soft skill improvement training to improve software developers' skills. These training programs improve the software developer's skills to a level required at the moment, and some training programs are too late to initiate. As a lesson learned from that when hiring fresh graduates, some companies provide training before employment. Therefore, this research aims to find out the skill gap of the software developers in Sri Lanka and determine which skills impact the software developer's productivity, and find out how to improve the software developer's productivity. A survey was carried out among a sample of software developers. A series of interviews were conducted with industrial experts to determine the aspects influencing the software developer's productivity and present significant factors. Based on the analysis undertaken to the collected data, the results revalidate that the software developer has to strengthen soft skills such as Team Working, Problem-solving, Communication Skills, and improving programming skills to improve the software developer's productivity. The results revalidate that even though programming skills are considered the key skill for a software developer, the software developer should improve soft skills to benefit programming skills. Industrial experts suggest several approaches to improve these skills. Based on the survey result and expert feedback, sharing knowledge in platforms, taking online courses, and trying out new technologies can improve software developers' productivity by improving technical skills.

Further, the findings show that training such as leadership and team working training and business communication training should improve soft skills. This training was suggested to be arranged by the employer based on the business requirement. Employers should encourage the employees to do self-learning and try out new technologies. Education institutes should also provide training that focuses on soft skills such as teamwork and communication to improve software developer's soft skills. Also, expert feedback suggested that the education institutes should encourage students to take online courses to match the IT industry's expectations.

ACKNOWLEDGMENT

I want to expose my sincere thankfulness to all those who supported me in completing my research study on “Improving software developer’s productivity.” Initially, I would like to thank my thesis supervisor, Dr. Shantha Fernando, for the guidance and support provided throughout the research study. He was always available there to clear my doubts and questions about the research or writing. He constantly allowed this to be my work while guiding me in the correct direction. Also, I would like to thank Dr. Dilum Bandara, the former coordinator of the MBA in IT, for the encouragement and guidance and all the other faculty members in the CSE department at the University of Moratuwa.

I would also take this opportunity to thank the industry experts who took part in interviews for this research project and the support I got from the software developers who participate in the online surveys to provide their valuable input. The following research dissertation was carried out with the help of the people known and unknown to me. Finally, I appreciate those who helped me in many ways, although the names which are not mentioned above but were useful for the success of this study.

COPYRIGHT STATEMENT.....	ii
ABSTRACT	iii
ACKNOWLEDGMENT	iv
1. INTRODUCTION	1
1.1. Background.....	1
1.2. Motivation.....	1
1.3. Problem Statement and Research Question.....	2
1.4. Research Objectives.....	2
1.5. Research Scope.....	3
1.6. Research Significance.....	3
1.7. Outline	3
2. LITERATURE REVIEW	5
2.1. Introduction.....	5
2.2. Importance of software developer’s productivity.....	5
2.3. Required knowledge and skills for software developers	6
2.3.1. Team-working skills	6
2.3.2. Time and task management skills.....	6
2.3.3. Communication skills	7
2.3.4. Interpersonal skills.....	7
2.3.5. Problem-solving.....	8
2.3.6. Analytical Skills.....	8
2.3.7. Creative thinking skills	8
2.3.8. Programming skills.....	8
2.4. Absences of software development skills.....	9
2.5. Improving software developers’ skills.....	11
2.5.1. Academic contribution to improving software developer’s skills	13
2.6. Summary.....	15
3. RESEARCH METHODOLOGY	16
3.1. Research Method	16
3.2. Data Collection.....	21
3.3. Population and Sample Selection	21
3.4. Process of Data Collection.....	22
3.5. Summary.....	24

4. DATA ANALYSIS	25
4.1. Data Preparation for Analysis.....	25
4.2. Demographic Analysis.....	25
4.3. Inferential analysis.....	27
4.3.1. Descriptive and Regression Analysis	28
4.3.2. Hypothesis Testing	30
4.3.3. Simple Regression Analysis	35
4.4. Descriptive and regression analysis for samples	53
4.4.1. Descriptive and regression analysis for Female Group	53
4.4.2. Descriptive and regression analysis for Male Group.....	55
4.4.3. Descriptive and regression analysis for 2-5 Years of IT experience	56
4.4.4. Descriptive and regression analysis for 0-1 Years of IT experience	57
4.5. Descriptive and regression analysis of Other Skills	58
4.6. Analysis of approaches which provide knowledge and training to improve the productivity	60
4.7. Expert feedback on improving the software developer’s productivity	62
4.7.1. Expert feedback 1	63
4.7.2. Expert feedback 2	64
4.7.3. Expert feedback 3	64
4.7.4. Expert feedback 4	65
4.7.5. Expert feedback 5	65
4.8. Summary.....	66
5. RECOMMENDATIONS AND CONCLUSION	67
5.1. Observations & Recommendations	67
5.1.1. Team working skill should improve to improve productivity	67
5.1.2. Problem-solving skill should improve to improve productivity	67
5.1.3. Programming skill should improve to improve productivity.....	68
5.1.4. Written communication skill has less impact on improving software developer’s productivity	68
5.1.5. Verbal Communication, Analytical, Creative Thinking, Interpersonal and Time and task management skills also have an impact on improving software developer’s productivity	68
5.2. Conclusion.....	69
5.3. Research Limitations	70
5.4. Future work.....	71
