## **ABSTRACT**

Being competitive is vital for surviving in today's global market place. A high level of Quality is a key attribute of competitiveness. Therefore Quality Assurance (QA) is a critical factor in any industry, especially in the field of Information Technology (IT). However in IT, though QA is a critical component, it is a highly misunderstood field. As a result a shortage of skilled QA Engineers exists today in Sri Lanka. This is mainly due to undergraduate IT students not considering QA as a good career path.

The primary objective of this research paper is to determine why a majority of IT graduates do not consider Quality Assurance as a career option. Consideration was given to answering the question of whether QA Engineers are satisfied with their current work duties, whether the target segment of applicants for QA positions should be changed and to collect recommendations to motivate QA Engineers in Sri Lanka.

In pursuit of these objectives, the research focuses on an extensive literature review. Following which, the results of an unstructured interview is presented. The set purpose of the unstructured interviews was to investigate the scope of work entrusted to QA Engineers in Sri Lanka and their perceptions, attitudes and behavioral responses towards Software Quality Assurance. Based on these results, an extended field survey was carried out targeting four different groups of individuals to answer the primary objective of the research.

Based on the overall findings, the study concluded that good graduates were not interested in joining QA. Research revealed that this is due to industry salary scales, and them not considering QA as an important function of the IT sector. This negative impact on the students' perceptions of QA is contributed to by the tasks currently handled by QA Engineers and their low job satisfaction levels. Therefore students perceived QA as a less desirable career option.

## DECLARATION

“I certify that this thesis does not incorporate without acknowledgement any material previously submitted for a degree or diploma in any university to the best of my knowledge and belief, it does not contain any material previously published, written or orally communicated by another person or myself except where due reference is made in the text. I also hereby give consent for my dissertation, if accepted, to be made available for photocopying and for interlibrary loans, and for the title and summary to be made available to outside organizations”

## ACKNOWLEDGEMENT

The following research dissertation was completed with the help of many people. I would like to extend my heart-felt gratitude to each and every one of them. Most importantly, I would like to express a special appreciation to the following individuals, universities and companies. First of all to my project supervisor and Head of Computer Science & Engineering of the University of Moratuwa, Ms. Vishaka Nanayakkara, for the encouragement, guidance and support extended to me during the research project. Dr. Chathura de Silva who was the course coordinator for the MBA in IT for our batch and all the faculty members of the Department of Computer Science and Department of Management of Technology at the University of Moratuwa.

I wish to express my sincere gratitude towards the lecturers and students of University of Colombo School of Computing, Sri Lanka Institute of Information Technology, Asia Pacific Institute of Information Technology and Informatics Institute of Technology, and all the software companies and QA professionals who completed the questionnaire and gave me valuable feedback and suggestions during the research survey.

I would like to thank the management of MillenniumIT Software Limited and especially Ms. Umanga Dumbukola, Head of Quality Assurance for all her detailed and constructive comments, and support throughout this work. Ms. Samanthie Gunasekara, Head of People Management and Development for her comments. My team members, for completing the questionnaire and giving me valuable feedback and lots of encouragement.

Finally I would like to express my heart-felt gratitude to Miss Wathsala Perera, Mr. Iyendra Ratnanather and Mr. Yashas Mallawarachchi who helped me in numerous ways. Last but not least to my family. My parents for encouraging me and for looking after my children. My husband for all the encouragement, support, for looking after the children, and most importantly for having faith in me. This research would not have been possible if not for you. Finally my babies, Randev and Randika for whom I wish to dedicate this thesis.
