

# **THINKING LIKE HUMAN APPROACH TO AI FOR GAMEPLAYING**

Sadika Hasantha Sumanapala

(189398U)

Degree of Master of Science in Artificial Intelligence

Department of Computational Mathematics

University of Moratuwa

Sri Lanka

March 2021

# **THINKING LIKE HUMAN APPROACH TO AI FOR GAMEPLAYING**

Sadika Hasantha Sumanapala

(189398U)

Thesis submitted in partial fulfillment of the requirements for the  
degree of Master of Science in Artificial Intelligence

Department of Computational Mathematics

University of Moratuwa

Sri Lanka

March 2021

## **Declaration**

I declare that this is my own work and this thesis does not incorporate without acknowledgement any material previously submitted for a Degree or Diploma in any other University or institute of higher learning and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my thesis/dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future works (such as articles or books).

Name of the Student:

S. H. Sumanapala

Signature of the Student:

Date:

The above candidate has carried out research for the Masters thesis under my supervision.

Name of the supervisor:

Prof. A. S. Karunananda

Signature of the Supervisor:

Date:

## **Dedication**

I dedicate this thesis to my family and friends. I will always appreciate the help of friends for the things all they have done and their valuable thoughts. I dedicate this work and give many thanks to people at University of Moratuwa for their help and especially for lecturers for providing guidance throughout this research.

## **Acknowledgement**

I would like to express my very great appreciation to Prof. Asoka Karunananda for his generous support for this project.

Also, I would like to thank all the lectures of the Department of Computational Mathematics for their guidance during the course and all the resources and support provided to make this project successful.

## Abstract

Playing games helps humans relax and their minds. Games have a very long history. They were used as a leisure activity even by early humans. It involves both mind and body. With the development of computers games became more complex and entertaining. Computers are extensively used to model, simulate and develop games. Games require us to use our cognitive power to plan and take sudden discussions to win. Chess, Go are highly complex games in terms of options that a player must think about when making a move. There are a lot of different paths that a player can take to win a game. Therefore, many researchers try to use various technologies to develop applications which can play games. The development of these technologies also helps to solve complex problems in completely different areas such as finance, economics, and warfare.

According to the other researchers work. Multi Agent Systems (MAS) have ability to modal complex problems. Because of that we developed a system using MAS to play games. Suggested solutions are developed using thinking of human's behaviors. When humans face a problem, they think about it in several ways. In their mind they compare, contrast and argue to find the best possible solution. Similarly, in multi agent systems intelligent agents solve complex problems by communication, coordination and negotiation. Game playing is a problem solving that involves thinking, decision making and negotiation skills of the human mind. Even though this is very intuitive to the human mind proper designing needs to be done to model this way of problem solving into an AI system. Here we designed a multi agent game playing system to play N-puzzle game. It contains mainly two types of agents: coordinator agent and decision agents. For the N puzzle game there are four decision agents namely up, down, left, right decision agents. They analyze the game state, negotiate with each other to determine the best move to make. For the development of the solution, we used SPADE architecture-based multi agent framework. The results show the proposed solution able to achieve notable improvement (~42%) compared to human players.

**Keywords:** Agents, Multi Agent Systems, Game playing

## Table of Contents

Declaration	i
Dedication	ii
Acknowledgement	iii
Abstract	iv
Table of Contents	v
List of Figures	viii
List of Tables	ix
List of Abbreviations	x
Chapter 1 Introduction	1
1.1 Prolegomena	1
1.2 About Game Playing and Thinking	1
1.3 Aim and Objectives	2
1.3.1 Aim	2
1.3.2 Objectives	2
1.4 Background and Motivation	3
1.5 Problem in Brief	3
1.6 Structure of the Thesis	3
1.7 Summary	3
Chapter 2 Literature Review	4
2.1 Introduction	4
2.2 Game playing using Artificial Intelligence	4
2.3 Emergence of Multi Agent Systems	5
2.4 Game Playing using Multi Agent Systems	6
2.5 Limitations and Current Approaches	7
2.6 Problem	8
2.7 Summary	8
Chapter 3 Technology Adapted	9
3.1 Introduction	9
3.2 Multi Agent Technology	9

3.2.1 Agent in MAS	9
3.2.2 Communication in MAS	10
3.2.3 Agent modeling software and frameworks	11
3.3 Expert System	12
3.4 Technology of Framework used in Game Player System	12
3.5 Summary	13
Chapter 4 Approach	14
4.1 Introduction	14
4.2 Hypothesis	14
4.3 Input	14
4.4 Output	14
4.5 Process	14
4.6 Users	15
4.7 Features	16
4.8 Summary	16
Chapter 5 Design	17
5.1 Introduction	17
5.2 High Level Architecture	17
5.3 Components of the MAS Game Player System	18
5.3.1 Coordinator Agent	18
5.3.2 Decision Agent	18
5.3.3 Action Agent	19
5.3.4 Communication Layer	20
5.4 Summary	20
Chapter 6 Implementation	21
6.1 Introduction	21
6.2 Tools and Technology	22
6.2.1 Python	22
6.2.2 Redis	22
6.3 Agent Implementation	22
6.3.1 Coordinator Agent	23
6.3.2 Decision Agents	25
6.3.3 Action agent	28
6.4 Communication Layer	28
6.5 Storage Layer	29

6.6 Summary	29
Chapter 7 Evaluation	30
7.1 Introduction	30
7.2 Experimental Design	30
7.2.1 N-Puzzle Game	30
7.2.2 Human player	32
7.2.4 A* N-Puzzle Solver	32
7.2.5 N-Puzzle for MAS Game Player	32
7.3 The Setup	33
7.4 Evaluation Strategy	33
7.4.1 Heuristics	34
7.4.2 Utility of a board state	34
7.5 Experimental Sample Data	35
7.5.1 Collecting data from human players	35
7.5.2 Collecting data from A* n-puzzle solver	35
7.6 Experimental Results	37
7.7 Discussion on Results	38
7.8 Summary	38
Chapter 8 Conclusion & Further Work	40
8.1 Introduction	40
8.2 Concluding Remarks	40
8.3 Limitations and Future Work	41
8.4 Summary	41
References	42
