DECLARATION OF THE CANDIDATE & SUPERVISOR

I declare that this is my own work, and this dissertation does not incorporate any material previously submitted for a degree or diploma in any other university or institute of higher learning without acknowledgement and to the best of my knowledge and belief it does not contain any material previously published or written by another person except where the acknowledgement is made in the text.

Also, I hereby grant to University of Moratuwa the non-exclusive right to reproduce and distribute my dissertation, in whole or in part in print, electronic or other medium. I retain the right to use this content in whole or part in future work (such as articles or books).

Signature:

Date: 02-09-2023

The above candidate has carried out research for the PhD Dissertation under my supervision.

Name of the supervisor: Prof. H.R. Pasindu

Signature of the Supervisor:

Date: 18.9.2023

Name of the supervisor: Dr. Varuna Adikariwattage

Signature of the Supervisor:

Date: 18/09/2023

AKNOWLEDGMENTS

First and foremost, it is with great respect and veneration that I express my appreciation to my research supervisor, Prof. H.R. Pasindu & Dr. V.V. Adikariwattage for sacrificing his worthy time of heavily loaded work schedule to guide, direct, advice, comment, correct and criticize my work; further allowing me to learn through my own experience. Without the knowledge, advice and vast experience imparted to me by my supervisor, I may not have been able to complete my research successfully. I would like to pay my heartiest gratitude to Dr. Namali Sirisoma for her valued comments given in the periodic progress review sessions.

Prof. (Mrs) C. Jayasinghe, Head of the Civil Engineering Department and all the lecturers of the department should be mentioned with sincere gratitude. I would like to thank all the staff members of the Transportation Division of the Civil Engineering Department for their support in various ways during the research.

I am also thankful for the enormous help and assistance I received from Prof. Allexandre de Barros, Prof. Wasantha Mampearachchi, Dr. Amila Silva as the panel members.

Finally, I must express my very profound gratitude to my parents and to my spouse, and family members for providing me with unfailing support and continuous encouragement throughout my years of study.

ABSTRACT

High speed exit taxiways are used as a method of increasing runway operational capacities by means of reducing runway occupancy times of aircraft. With the increased utilization of high speed exits, the number of accidents that could take place at these exits in the future could increase. Following the research gap on high speed exit taxiways-related risk analyses, the study developed methodologies to evaluate the associated risk at high speed exit taxiways. These methodologies are to evaluate exit overrun risk at a given exit location (R2), aircraft veer-off risk during the turning maneuver (R4) and incursion risk at the high speed exit and parallel taxiway intersection (R6). Due to a lack of data for developing statistical models, the R4, and R6 followed a novel approach. For the R2, the existing landing overrun model was modified for planning risk-based exit locations against the aircraft's operational and metrological-related variables. A deterministic model was derived to evaluate aircraft veer-off risk at distinct operating conditions. The R4 was used to compare taxiway design characteristics such as acute angle, radius of curvature, etc. against veer-off risk. The analytical approach under R6 evaluated incursion risk due to violations of minimum separations between aircraft on the high speed exit taxiway and parallel taxiway. The methodology developed under this study could be used to evaluate aircraft risk at high speed taxiways and planning taxiway design elements. One of the key findings of this study was that every 250 m of displacement of high speed exit location towards the runway end reduces exit overrun risk by 30 percent with respect to the previous location. Further, a 30-percent increase in taxiway width and taxiway design radius result in 32-percent and 60-percent reductions in veer-off risk respectively. By incorporating risk, the methodology provides an approach for risk-based planning of high speed exit taxiways to improve runway capacity without compromising aircraft safety.

Keywords: High Speed Exit; Rapid Exits; Runway Occupancy Time; Taxiway

TABLE OF CONTENTS

1	Introduction.....	1
1.1	Background.....	1
	Importance of high speed exits in runway operations.....	1
	Aircraft Accidents.....	3
1.2	Problem Statement.....	6
1.3	Research Objective.....	8
1.4	Research Outline.....	9
2	Literature Review.....	10
2.1	Introduction.....	10
2.2	High Speed Exit Taxiways.....	12
2.2.1	High speed exit taxiway design.....	12
2.2.2	Exit taxiways.....	15
2.3	Airside accidents.....	18
2.1.1	Introduction to airside accidents.....	18
2.2.1	Runway events.....	20
2.3.1	Accidents in ramp areas.....	22
2.4.1	Accidents at high speed exit taxiways.....	22
2.4	Risk Factors on Airfield Accidents.....	23
2.5	Risk Assessments.....	26
2.5.1	Target level of safety.....	26
2.5.2	Qualitative assessments.....	27
2.5.3	Quantitative risk analysis.....	27
2.5.4	Incursion risk analysis studies.....	42
2.6	Airfield Design Considerations.....	43
2.6.1	Runway design.....	43
2.6.2	Runway safety areas.....	47
2.6.3	Taxiway design.....	49
2.7	Research on High Speed Exit Taxiways.....	53
3	Methodology for High Speed Exit Overrun Risk Analysis.....	57
3.1	Aircraft Risk at High Speed Turn offs.....	57
3.2	Risk Estimation.....	60
3.3	Methodology for Evaluation of Exit Overrun Risk (R2).....	61
3.3.1	Runway overrun risk estimation.....	62
3.3.2	Exit locations and selection of the number of exits.....	66
3.3.3	Exit overrun risk.....	67
3.4	Illustrative Example for Runway Overrun Risk Analysis.....	72
3.4.1	Illustrative example for runway overrun risk analysis.....	72

3.4.2	Illustrative example for exit overrunning risk analysis.....	78
3.5	Chapter Summary	82
4	Methodology for Veer-off Risk Analysis during High Speed Exiting Maneuver	83
4.1	Aircraft Veer-off Risk at High Speed Exit Maneuvers.....	83
4.2	Evaluation of Veer-off Risk at High Speed Exits	84
4.2.1	Veer-off event probability (Pe_i).....	85
4.2.2	Location probability (X_i).....	98
4.3.1	Event consequences (S_i).....	105
4.3	Illustrative Example for Analysis of Aircraft Veer-off Risk During Turning Maneuver	107
4.3.2	Illustrative example.....	107
4.3.2	Veer-off risk analysis results.....	110
