

**AN ANALYSIS OF THE MORPHOLOGY OF AN URBAN
ENVIRONMENT OF SRI LANKA, USING 'SPACE SYNTAX'**

A.M. Binduhewa

Dissertation submitted in fulfillment of the requirements for the degree Master of Science
(Architecture)

Department of Architecture

University of Moratuwa

Introduction	v
Chapter one : Urban Morphology for Analyzing Urban Environments	1
1.1 The urban environment	1
1.1.1 The city	1
1.1.2 The city form	2
1.2 Study of urban form (Urban morphology)	4
1.2.1 Introduction to urban morphology	4
1.2.2 Recent developments in urban morphology	5
1.2.3 Human aspect of urban form and architects contribution	6
1.3 Urban environment, its impact on human activities and behavior	7
1.3.1 Understanding of social and space relationship	7
1.3.2 Understanding of-'What architecture adds to building'	8
1.4 Related research and theories on social and space relationship	8
1.5 The city form and social understanding - reference to related research/ Theories	10
1.5.1 Elements of good city form	11
1.5.2 Design of responsive environments and urban design principles	12
1.5.2.1 Permeability	13
1.5.2.2 Vitality - Places that are vibrant, safe, comfortable, varied, fun, and active	13
1.5.2.3 Variety - A successful place also offers a mix of activities to the widest range of possible users	14
1.5.2.4 Imageability and legibility as significant qualities of the city	14
1.5.2.5 Robustness	16
1.6 Space syntax for the study of urban environments	
1.6.1 The basis for the identification - space syntax urban environments	

to study of	17
Chapter two : Space Syntax as a Method to Analyze the Urban Environments	17
2.1 Introduction - Space syntax	20
2.1.1 What is 'space syntax'?	20
2.1.2 Space syntax - definition	21
2.1.3 Origin of the Space syntax	21
2.1.4 Why? Syntax of space need for the urban developments	22
2.2 Space syntax as a morphological approach to analyze urban environments and its significance	22
2.3 Social constraint and configurational possibility in Space syntax	23
2.3.1 Space syntax as plausible model for predict spatial cognition	24
2.4.1 Spatial configuration / morphology	24
2.4.2 Spatial cognition	25
2.5 Space syntax theory	25
2.5.1 Study the morphology of urban environments	26
2.5.2 Representation of urban environment	27
2.5.3 Understand the morphological structure using space syntax	28
2.5.4 Basic spatial elements to represent urban space	30
2.6 Morphological representation using axial maps	32
2.6.1 The axial map	32
2.6.2 Axial representation through colors	32
2.7 Morphological properties that can measure using space syntax	34
2.7.1 Morphological properties of the axial representation	35
2.7.2 Distance and human understanding	36
2.7.2.1 Cognitive distance and human perception	37
2.4.1 Spatial configuration / morphology	24
2.4.2 Spatial cognition	25
2.5 Space syntax theory	25
2.5.1 Study the morphology of urban environments	26
2.5.2 Representation of urban environment	27
2.5.3 Understand the morphological structure using space syntax	28
2.5.4 Basic spatial elements to represent urban space	30

2.6	Morphological representation using axial maps	32
2.6.1	The axial map	32
2.6.2	Axial representation through colors	32
2.7	Morphological properties that can measure using space syntax	34
2.7.1	Morphological properties of the axial representation	35
2.7.2	Distance and human understanding	36
2.7.2.1	Cognitive distance and human perception	37
2.7.3	Global integration and local integration	37
2.7.4	Understanding the morphological measures	38
2.8	Concluding remarks- the theoretical framework used by space syntax	39
2.9	Application of space syntax tools in urban developments	40
2.9.1	The sectors and the contribution of space syntax	40
2.10	International implications of space syntax, in the field of urban design	43

Introduction

Chapter one : Urban Morphology for Analyzing

Urban Environments

1.1	The urban environment	1
1.1.1	The city	1
1.1.2	The city form	2
1.2	Study of urban form (Urban morphology)	4
1.2.1	Introduction to urban morphology	4
1.2.2	Recent developments in urban morphology	5
1.2.3	Human aspect of urban form and architects contribution	6
1.3	Urban environment, its impact on human activities and behavior	7
1.3.1	Understanding of social and space relationship	7
1.3.2	Understanding of –'What architecture adds to building'	8
1.4	Related research and theories on social and space relationship	8
1.5	The city form and social understanding – reference to related research/ Theories	10
1.5.1	Elements of good city form	11
1.5.2	Design of responsive environments and urban design principles	12
1.5.2.1	Permeability	13
1.5.2.2	Vitality - Places that are vibrant, safe, comfortable, varied, fun, and active	13
1.5.2.3	Variety - A successful place also offers a mix of activities to the widest range of possible users	14
1.5.2.4	Imageability and legibility as significant qualities of the city	14
1.5.2.5	Robustness	16

1.6	Space syntax for the study of urban environments	17
1.6.1	The basis for the identification – space syntax to study of urban environments	17

Chapter two : Space Syntax as a Method to Analyze the Urban Environments **20**

2.1	Introduction – Space syntax	20
2.1.1	What is ‘space syntax’?	20
2.1.2	Space syntax – definition	21
2.1.3	Origin of the Space syntax	21
2.1.4	Why? Syntax of space need for the urban developments	22
2.2	Space syntax as a morphological approach to analyze urban environments and its significance	22
2.3	Social constraint and configurational possibility in Space syntax	23
2.3.1	Space syntax as plausible model for predict spatial cognition	24
2.4	Configurational analysis of the city	24
2.4.1	Spatial configuration / morphology	24
2.4.2	Spatial cognition	25
2.5	Space syntax theory	25
2.5.1	Study the morphology of urban environments	26
2.5.2	Representation of urban environment	27
2.5.3	Understand the morphological structure using space syntax	28
2.5.4	Basic spatial elements to represent urban space	30
2.6	Morphological representation using axial maps	32
2.6.1	The axial map	32
2.6.2	Axial representation through colors	32
2.7	Morphological properties that can measure using space syntax	34
2.7.1	Morphological properties of the axial representation	35
2.7.2	Distance and human understanding	36
2.7.2.1	Cognitive distance and human perception	37

2.7.3	Global integration and local integration	37
2.7.4	Understanding the morphological measures	38
2.8	Concluding remarks- the theoretical framework used by space syntax	39
2.9	Application of space syntax tools in urban developments	40
2.9.1	The sectors and the contribution of space syntax	40
2.10	International implications of space syntax, in the field of urban design	43
	Case study 1	43
	Case study 2	49

Acknowledgment

Completion of this study would not have been possible if not for the help of many, who supported both physically and morally. Therefore I would like to express my thanks to the following persons who assisted me in numerous ways.

- Dr. Jagath Munasinghe, Senior Lecturer, Dpt. of Architecture and Dpt. of Town and Country Planning, University of Moratuwa, for the necessary guidance given to start and carry on the study.
- Professor Bill Hiller, Architectural and environment- behavior theorist in Advanced Architectural Studies Unit at the Bartlett School of Architecture and Planning, University College London (UCL) for the generous support by giving me the valuable data, theoretical knowledge to my study and to adopt that in Sri Lankan situation.
- Dr. Harsha Munasinghe and Archt. Madura Prematilaka Senior Lecturers, Dpt. of Architecture, University of Moratuwa, for being behind and guide throughout the process.
- Dr. Upendra Rajapaksha Senior Lecturer and the Coordinator of the Dissertation, and Archt. Jayanath Silva Senior Lecturer Dpt. of Architecture, University of Moratuwa, for the valuable comments and information that they provide.
- My parents, Diluk, Meenu, Ungi for providing me with all the support to carryout my entire task without any laps.
- To Gaiya and sumudu for the help and for the thoughts that share with me on my work, throughout the study
- For whose names are not listed, who helped me in so many ways.

Fig. 1	A city is a growing entity and it changes in the context of time.	1
Fig. 2	City form generates the character, identity, and uniqueness of a city, St. Peter's Rome	2
Fig. 3	Cities, maintaining its spatial relationships according to the functional needs	2
Fig. 4	Elements of good city form	3
Fig. 5	The study of the form and structure of an urban area	5
Fig. 6	People and their activities have great impact on the city form, and shaping it with there functional needs.	5
Fig. 7	Through spatial organization, buildings constitute as well as represent social reality	6
Fig. 8	Understanding of what people need for space can be important for architects and urban designers to provide an attractive environment in order to stimulate urbanity	6
Fig. 9	Group of squares in Bath, Rome unique in the relationship between space, and the surrounding buildings	7
Fig. 10	Built forms constitute the social organization of everyday life as the spatial configurations of space in which we live and move, And represent social organization as physical configurations of forms and elements that we see.	7
Fig. 11	Elements of good city form Landmarks, edges, paths, Districts and nodes	11
Fig. 12	The use of Permeability in urban designs	13
Fig. 13	Places feel safer with buildings overlooking them.	13
Fig. 14	Mixed use development works well in higher densities because there are more people to support the variety of activities.	14
Fig. 15	A more vibrant and sustainable form results from blurring the direction between uses and designing places that make walking to the local center	14
Fig. 16	"Legibility is the ease with which the parts of a town or city can be recognized and organized into a coherent Pattern."	15
Fig. 17	Landmarks - Points of reference which most people experience from the outside	17
Fig. 18	12 cities, images of – very similar	26
Fig. 19	Cities are similar in this way	27
Fig. 20	Closed spaces and open spaces	28
Fig. 21	The convex and axial maps of space syntax.	29

Fig. 22	The viewable space of an urban environment which can be represent in a axial map	29
