## Declaration

This Dissertation paper contains no material which has been accepted for the award of any other degree or diploma in any University or equivalent institution in Sri Lanka or abroad, and that to the best of my knowledge and belief, contains no material previously published or written by any other person, except where due reference is made in the text of this Dissertation.

I carried out the work described in this Dissertation under the supervision of  
Dr. M.A.R.V. Fernando.

Date : 11/07/2006

(Signature of Student)

Name of Student: R.P.P. Krishantha

Reg. No : 02/9639

University of Moratuwa, Sri Lanka  
Electronic Theses & Dissertations

The Dissertation Proposal prepared by R.P.P. Krishantha is recommended and forward for onward action please.

Date : 11/07/2006

(Signature of Supervisor)

Name of Supervisor: Dr. M.A.R.V. Fernando

## **Acknowledgement**

I would like to express my sincere gratitude to Dr. M.A.R.V. Fernando, Senior Lecturer, University of Moratuwa, for guiding through the literature survey and for his guidance and inspiration to make this project a success. I would also like to thank Dr. A. G. T. Sugathapala, the Head of Mechanical Department, Dr. G.K. Watugala, Senior Lecturer, Dr. P.A.B.A.R. Perera, Senior Lecturer, and Mr. H.K.G. Punchihewa Lecturer, University of Moratuwa, Sri Lanka.

I would like to thank the Coordinator Dr. U. Kahangamage, Senior Lecturer, University of Moratuwa, for the coordination and enthusiastic support extended during this special research project.

Finally, I would like to thank all the staff members of the Department of Mechanical Engineering in “Manufacturing Systems Engineering” Master of Engineering Course.

My special thanks go to Dr. M.A.R.V. Fernando for enlightening me with the concept of the Selective Tea Plucking Machine which was awarded the Best Innovation at “Innovations UOM 2005” the exhibition held on 16<sup>th</sup> – 18<sup>th</sup> September 2005 at BMICH.

## **Abstract**

This thesis focuses on the research project is “Selective Tea Plucking Machine”. According to my literature survey I have found that Tea plucking machines are designed in many countries but they are designed only for plucking and selecting method. These machines are very large and expensive. It is used only for flat land. However this at present is a completely manual process and is responsible for a substantial portion of the cost of tea manufacture.

In manual plucking, plucking tea leaves are retained between fingers till reasonable amount of leaves are collected. Then ‘holding between fingers’ often cause some degree of crushing leading to commencement of premature fermentation. Therefore quality will be reduced. Thus it has become essential to mechanise this process to improve productivity, yet retaining the high quality and accuracy of selective plucking.

Due to above technical and financial restrictions facing with research as well as depth of expected research study to be performed by using own methods to design low cost and portable machine.

In this context is carried out considering selective plucking method. Further, considering the ergonomics aspects are essential for this design, it is useful to operate this machine without fatigue. It is based on less weight of the machine, holding and bag (container) arrangement. It is understood that the given detailed of the cutting mechanism and the tea leaves are transported to the bag (container) with suitable convey system.

This report contains literature survey, field test, design details, and economic feasibilities.

## Table of Contents

	<b>Page#</b>
Title	i
Declaration	ii
Acknowledge	iii
Abstract	iv
List of Illustrations	v
List of Tables	vi
List of Contents	vii-x
Chapter 1 - Introduction	1-2
1.1 History of Tea in Sri Lanka	3-4
1.2 Plucking system	5
1.3 Plucking styles	6
1.4 Time of plucking	6
1.5 Different type of basket	7
Chapter 2 - Introduction of plucking methods and machines	8
2.1 Why is plucking so important?	8
2.2 What is good plucking?	8
2.3 Do not pluck coarse leaf and immature shoots	8-9
2.4 Removal of <i>BANJIS</i>	9-10
2.5 Plucking	11-14
2.6 Tea plucking machines in different countries	15-17
Chapter 3 - Output quantity of finish production	18-19
Chapter 4 - Problem involving in plucking	20
Chapter 5 - Objectives	21

Chapter 6 - Details of research	22
6.1 Details of research up to now	22
6.1.1 TRI (Tea Research Institute) project	22
6.1.2 Machines in other countries	22
6.1.3 Patent literature	22
6.1.3.1 The concept of the present tea plucking machine	22
6.1.3.2 Another tea plucking machine	23
 Chapter 7 - Ergonomics	 24
7.1 Basic aims of ergonomics for the plucking machine	24
7.2 Benefits of ergonomics for the plucking machine	24
7.3 Muscular work	25-27
 Chapter 8 - Need for a tea plucking machine	 28
8.1 User needs	28
8.2 Engineering perspective	28-29
8.3 Main problems	29
8.4 Secondary problems	29
8.5 Design tree diagram	30
8.6 Selection of the best method	31-43
 Chapter 9 - Cutting force calculation	 44-52
9.1 Basic model of the tea plucking machine	53
9.2 Drawing of the tea plucking machine	54
9.3 How to work portable machine	55
 Chapter 10 - Field test of the plucking machine	 56
10.1 Drawing of a modification cutter	57
10.2 Modification drawing	58
 Chapter 11 - Estimate cost of making prototype	 59
11.1 Cost calculation of the machine	59

11.2 Projected manufacturing cost for 20 number of machine	60
Chapter 12 - Discussion	61-63
Reference	64
Appendices	65-67
Appendices A	A1-A2
Appendices B	B1-B2
Appendices C	C1-C2
