Abstract

The main objective of this thesis is to develop an analytical method for quantification of uncertainty in building projects and thereby deciding the contingency allocation based on probability of success.

The factors that give rise to uncertainty in Bill of Quantities (BOQ) type of building contracts are discussed. The uncertainty of input items to a Bill of Quantities, namely, quantities of bill items, usages of resources in building schedule of rates (BSR) and their basic prices are quantified as two moments using subjective probabilities. From these, expected value and standard deviation of project cost are evaluated. The contingency allocation is decided based on the desired probability of success and the total allocation for the whole project is distributed among individual BOQ items. Finally it is discussed how the project manager can monitor the depletion of allocated contingency and exercise a management control over the total project cost and over individual BOQ items.

A computer program is designed to automate the whole process of contingency allocation.

Table of Contents

Abstract	ii
List of Tables	vi
List of Figures	vii
Acknowledgement	viii
1 Introduction	1
1.1 Background	1
1.1.1 Bill of Quantities	1
1.1.2 Uncertainties in the BOQ contracts	1
1.2 Literature Review	3
1.3 Motivation	8
1.4 Research Objectives	8
2 Theoretical Development	10
2.1 Probability Distribution for Cost Elements	10
2.2 Important Parameters of Probability Distribution	11
2.2.1 Moments and Expectation of a Random Variable	11
2.2.2 Moments and Expectations of Jointly Distributed Random Variable	15
2.3 Log Normal Distribution	18
2.3.1 Percentile q of the Log Normal Distribution	18
2.3.2 Shape of Log Normal Distribution	19
2.4 Quantification of Uncertainty Using Subjective Probability	22
2.4.1 Derivation of Expected Value and Standard Deviation for Input Values from Subjective Estimates	22

2.4.2	Three Point Estimates and Their Advantages	23
2.4.3	Quantification of Uncertainty in BSR Rate and BOQ	25
2.5	Contingency Allocation	29
2.5.1	Total Allocation	29
2.5.2	Two Tiered Contingency Allocation	31
2.6	Distribution of Contingency	34
2.7	Summary	35
3	Sample Calculations	36
3.1	General	36
3.2	Resource Prices	36
3.3	Resource Usage	38
3.4	Resource Item Rate	41
3.5	BOQ Item Rate	42
3.6	BOQ Item Quantity	44
3.7	BOQ Item Cost and Project Cost	47
3.8	Contingency	49
3.9	Distribution of Contingency	50
3.10	Summary	52
4	Computer Program	53
4.1	General	53
4.2	Basic Modules of this Software Facility	53
4.3	Outline of Computer Program	59

4.4	More Description of the Program	59
4.5	Summary	62
5	Benefits of Contingency Management to the Client and the Contractor	63
5.1	General	63
5.2	A Contingency Allocation for the Contractor	64
5.3	A Method for Including a Contingency Allocation in Contractor's Bid	66
5.4	Deciding a Contingency Allocation for the Total Project Cost	70
5.5	Contingency Management as a Tool for Monitoring the Project Cost	73
5.6	Summary	74
6	Conclusions and Recommendations	83
6.1	Conclusions	83
6.2	Recommendations for future work	85
6.2.1	Future Development to the Computer Software	85
6.2.2	Incorporating Correlation to the Calculation of Variances	86
6.2.3	Project Duration	86
	References	88
	Appendices	93
A	Extracts from Building Schedule Rates (1988)	93
B	The Computer Program	96

List of Tables

2.1	Example of BSR	25
2.2	Example of BOQ	26
3.1	Three Point Estimate of Resource Prices	37
3.2	E.V. and σ of Resource Prices	38
3.3	Three Point Estimate of Resource Usages	39
3.4	E.V. and σ of Resource Usages	40
3.5	Resource Item Rates for Rubble Masonry	42
3.6	E.V and σ of BOQ Rates	44
3.7	Three Point Estimate of BOQ Quantities	45
3.8	E.V and σ of BOQ Quantities	46
3.9	Probabilistic Bill of Quantities	48
3.10	Contingency Allocations	51
5.1	Contractors Rates Inclusive of Contingency, Profits and Overheads	69
5.2	Computer Output of Resource Prices - General	75
5.3	Computer Output of Resource Prices - Contractor	75
5.4	Computer Output of Resource Prices - Client	76
5.5	Computer Output of BSR - General	77
5.6	Computer Output of BSR - Contractor	78
5.7	Computer Output of BSR - Client	79
5.8	Computer Output of BOQ - General - 95% prob.	80
5.9	Computer Output of BOQ - Contractor - 75% prob.	81
5.10	Computer Output of BOQ - Client - 95% prob.	82

List of Figures

2.2	Cumulative Log Normal Distribution	(20)
2.3	PDF for Project Cost	(30)
2.4	CDF for Project Cost	(32)
4.1	Flow chart for Resource Price Schedule	(55)
4.2	Flow chart for BSR	(56)
4.3	Flow chart for BOQ	(58)

Acknowledgement

I wish to express my most sincere gratitude to Dr. Malik Ranasinghe for his fervent support and guidance through out this project.

I thank Dr. Gamini Kodikara and Dr. Asoka Perera for reviewing this thesis.

Many thanks to my friends Afzail, Dhananjaya and Vajira for helping me to type the thesis.
