ABSTRACT

" Architecture is not the product of materials and purposes - nor by the way of social conditions - but of the changing spirits of changing ages" 1

Over time, people, conditions, aspirations and technologies change. Man has always strived for a better world, improving life's conditions by innovation. His home, his city... the built environment around him has subsequently developed to its present day conditions.

Science, technology and the development process are interwoven with each other. They also indicate the wealth of social, political, and religious ideas that generate buildings and designs and how these ideas affect economic growth and development.

Evidence of the phenomenal works of architecture which have lasted through the ages indeed are proof of a supreme design and technological excellence of our predecessors. This architectural excellence which has been manifested in the great remains of the Egyptian Pyramids of Geza, the great cathedrals of the Renaissance etc., is undoubted and universally acknowledged. But is it only the architectural design ability which brings forth such wonders ?

It is difficult to know whether architecture is the recipient and the user of new technologies or the generator of them. In truth, architecture has probably acted throughout history as a kind of propagator where technological seeds, which have been germinated elsewhere, are nurtured and reared , eventually to be transplanted in and consumed by society in diverse ways. Thus the tools or the technology are major carriers of change. Throughout history tools have changed the user and subsequently dominated the designer. The ultimatum occurs when the tool becomes the driving force... could this be so with information technology ?

Whenever technology produces a tool that provides a change in order of magnitude of a previous ability, a profound change in society will be in the offing in a more or less rapid fashion. A classic example of this is the steam engine which multiplied man's muscle by a factor of ten - a simple change of one order of magnitude. The basic change in our society following this development - a change historians call the Industrial Revolution - has been unique in man's history.

Similarly, the remarkable force with which the computer is entering our society is aptly illustrated by the above. With the introduction of new graphics software, the possibilities of creating or building virtual reality images of buildings and cities is made possible. The boring process of production and documentation of drawings is handled by the computer thereby leaving more time for creativity.

On the one hand this new ability could bring about supreme innovation and on the other hand it could inhibit creativity. It may change the user or the designer, thus dominate the design. The fact is, of course, that technology should be serving us, not making demands on us, let alone competing demands. If it gets to the point where we think of technology as anything other than our servant, then the building design - any design - beholds a bad beginning. The consequences of letting technology in, without having it under control, are dire. Unfortunately that is exactly what happens more often than not.

ACKNOWLEDGEMENTS

Many people have helped me understand and compile relevant information in producing this dissertation. I am indeed indebted to them and gratefully acknowledge their support.

I am especially grateful to my tutor Arct. Vidura Sri Nammuni, Arct. C J De Saram, Dr L S R Perera, Dr R Dayaratne, and Arct M Prematilleke For their invaluable guidance and advice.

Dr Arthur C Clarke, for his for his kind words of encouragement and wisdom in helping me get started with the study and selection of the appropriate area concerned.

I am greatly indebted to Arct Suchith Mohotti whose continuous interest, guidance, incisive comments, and patience, directed many aspects of this study. I am indeed grateful for all his help and encouragement and appreciative of all the time and generous lending of resourceful material devoted on my behalf.

Ravi, Computer Dept., for his time, patience and help in acquiring useful information through understanding and accessing the facilities of the Internet.

A special thanks to Nisha for her interest, advice and support offered so generously. Janaka, Sonali, Shanthini, Darnie, Upula, Christine and other friends for their contribution in helping me along.

My uncle, Hilmy Ahamed for spending a lot of his valuable time on this work, especially in the final compiling and printing stages.

My dear brother Khalid, for his help in painstakingly typing the drafts and continuous gaiety and encouragement to proceed with the work.

My dearest friends, Dilmini, Daitha and Prasad for all the help to photograph and gather vital information and vision needed. Words fail me, for without their presence, support, encouragement and advice, this dissertation would seem almost impossible.

Last but not in any way least, my dearest parents for their love, understanding, encouragement and support.

INFORMATION TECHNOLOGY AND ARCHITECTURAL DESIGN : AN OVERVIEW

Abstract	1
Acknowledgements	2
List Of Contents	4
List Of Plates	6
Introduction	7
Importance Of Study	
Background	
Definitions	
Scope And Limitations	
Method Of Work	
 Chapter One	
01 Determinants Of Architecture	17
1.1 Generators	18
1.2 Modifiers	19
1.2.1 Technology - A Modifier	22
1.2.1.1 Building Technology	23
1.2.1.2 Information Technology	25
 Chapter Two	
02 Information Technology As A Determinant Of Architecture	27
2.1 Historical Development Of Information Technology	27
2.2 Use And Application In Architecture	31
2.2.1 Technicalities	31
2.2.2 Office Environment	42
2.2.3 Limitations	51
 Chapter Three	
03 The Contribution Of Information Technology To Architectural Design	55
3.1 Effects Of Information Technology	55
3.1.1 Social Implications	56
3.1.2 Professional Environment	60
3.1.3 Spatially	65
3.1.3.1 Architectural Space	67
3.1.3.2 Graphical Space	70

3.2 Present Design Trends	77
3.2.1 Design Process	77
3.2.1.1 Approaches Of Architects	81
3.2.1.2 Forming And Shaping	89
3.2.1.3 Aesthetics	92
3.2.2 Architectural Works	96
3.2.2.1 Exhibitions	96
3.2.2.2 Built Works	101
Chapter Four	
04 Future Architecture with Information Technology	112
4.1 Tendencies	112
4.2 Dimensions Of New Architecture	116
4.3 Philosophies And Concepts	118
Conclusion	123
Bibliography	128
