

Dedication

I dedicate this thesis to my supervisor Dr. Gamini Wijayarathna who taught me lot of valuable lessons in this project. Without his support guidance, understanding, commitment, and patience, the successful completion of this project could have become a dream. Thank you for throwing the rock that helped me break through. You were a necessary component to push this book out of me.

Acknowledgment

This thesis is an outcome of the software developed in order to fulfil the requirement of the Msc in IT, Faculty of Information Technology, University of Moratuwa.

It is a pleasure to convey my gratitude to a great number of people whose contribution in assorted ways to this project in my humble acknowledgment.

At first, I must greatly acknowledge my project supervisor Dr. Gamini Wijayarathna, the senior lecturer of the Department of Industrial Management who offered me the most valuable guidance, patient listening, advising and encouragement from the very beginning of project. He provided me encouragement and support in various ways. His truly scientist intuition has made him as an icon of ideas and passions in IT, which exceptionally inspire and enrich my growth as a student. I admire his brilliant ability to understand individual as this would definitely address individual capacities.

I would like to extend my deepest thanks to Dr. L N Senaweera the Director General of Sri Lanka Standards Institution who gave me that great opportunity to undertake my project in the institution. I would like to extend my thanks to Mr. B D Ariyaratna the Assistant Director, IT Unit of Sri Lank Standards Institution and the Director Administration and all her staffs who supported and encouraged me to carry out the project tasks.

I gratefully thank to my parents and my wife Nilmini for the encouragement given me by tolerating all the difficulties faced during the past period of time and also would like to thank my brother and sister.

Also I would like to extend my heart full of thank to my dearest friends doctor Roshan, Sanath, Anuradha, Senaka and all other friends for the courage , advices and support provided.

Last but not least many thank to the academic & non academic staff members of University of Moratuwa for their support in various capacities and situations, and also all the people who contributed in numerous ways in order to successful completion of this project.

Table of Contents

	Page
Dedication	i
Declaration	ii
Acknowledgement	iii
Abstract	iv
Table of contents	v
List of figures	x
List of tables	xi
1 Introduction	1
1.1 Introduction to the company	1
1.2 Introduction to the system	2
1.3 Problems and weaknesses of the existing system in brief	3
1.4 Aims and objectives	3
1.5 System requirements	4
1.6 Chapter breakdown	5
2 Problem domain	6
2.1 Introduction	6
2.2 Existing system	6
2.2.1 Employee selection process	6
2.2.2 Recruitments handling process	7
2.2.3 EPF and ETF file handling process	8
2.3 Problems and weaknesses of the existing system	9
2.4 Personnel information management system in general	11
2.4.1 PIMS/HR software key systems benefits	11
2.4.2 Features of PIMS/HR software systems	12
2.5 Specific functionalities required for the proposed system	13
2.6 Comparison of proposed system vs some different systems available in the market	13

3 Technology adopted	15
3.1 Introduction	15
3.2 Software process models	15
3.2.1 Waterfall model	17
3.2.2 Evolutionary development model	19
3.2.3 Component based software engineering	20
3.2.4 Agile method	21
3.2.5 Comparison of software process models	21
3.3 System analysis and design methodology	22
3.3.1 Object oriented analysis & design	22
3.3.2 Structured system analysis and design methodology (SSADM)	23
3.3.3 Comparison of OOAD and SSADM	23
3.4 Unified modeling language (UML)	23
3.5 Development environment	24
3.5.1 LAMP	24
3.5.2 WAMP	25
4 My approach	26
4.1 Introduction	26
4.2 Feasibility study	26
4.3 Selected software process model	26
4.4 Selected system analysis and design methodology	27
4.5 Unified modelling language	27
4.6 Development environment	30
4.6.1 Front end programming languages used	30
4.6.2 Database management systems (DBMS)	30
4.7 Scope of the project and limitation	30
5 Analysis & design	32
5.1 Introduction	32
5.2 System analysis	32
5.2.1 Structural view of the existing system	32

5.2.2	Dynamic view of the existing system	35
5.2.3	Existing system use case descriptions	36
5.2.4	Existing system requirements	37
5.2.5	Software requirements specifications & partitioning of proposed system	37
5.2.5.1	Functional requirements	37
5.2.5.2	Non-Functional requirements	43
5.2.6	System architectural design	44
5.3	System design	46
5.3.1	Proposed system overview	46
5.3.2	Structural view of the proposed system	47
5.3.3	Dynamic view of the proposed system	48
5.3.4	Proposed system use case descriptions	49
5.3.5	Check list for proposed system	50
5.3.6	Proposed system sequence diagrams	52
5.3.7	Class diagram	52
5.3.8	Database design	53
5.3.9	Graphical user interface design (GUI)	53
5.3.10	User interface design decisions	54
5.3.11	User interface references	57
5.4	Problems faced lessons learned during analysis & design	59
6	Implementation	61
6.1	Introduction	61
6.2	Software & hardware installation and configuration	61
6.3	Testing of database connectivity	62
6.4	Security measures implemented	63
6.4.1	Password encryption	63
6.4.2	Sessions	63
6.4.3	Password protection and system login	64
6.4.4	System user management	65
6.5	Implementation of the system	65
6.5.1	Personnel administration sub system	65

6.5.1.1	Employee selection module	65
6.5.1.2	Employee recruitment module	68
6.5.1.3	EPF / ETF module	69
6.5.1.4	System administration sub system	69
6.6	Relationship between system architectural design and PHP files	69
6.7	Relationship between classes and PHP files	69
6.8	Issues faced during the implementation	69
7	Evaluation and testing	70
7.1	Introduction	70
7.2	Evaluation of the proposed system	70
7.2.1	Functionality	70
7.2.2	Understandability	71
7.2.3	Learnability	71
7.2.4	Operability	71
7.2.5	Attractiveness	72
7.2.6	Efficiency	72
7.2.7	Installability	72
7.3	Software testing	73
7.4	Types of testing	73
7.4.1	Component testing	73
7.4.2	System testing	74
7.5	Testing strategies	74
7.5.1	List of test cases	75
7.5.2	Test cases	76
8	Conclusion and further works	78
8.1	Introduction	78
8.2	Conclusion	78
8.3	Limitations of the solution & future works	79
