

## **8. Conclusion and further work**

### **8.1. Conclusion**

The aim of building this MIS for the DFCC bank is to reduce the times taken to provide vital data for the management to make decisions and also to address all the facts mentioned in chapter 1.5.2.

From the end user perspective, clean and simplified access to the consolidated data provides a pleasant working environment which helps work and the saved time can be utilized in other productive activities of the bank. The user frustration is eliminated as the system consists of all the required information to perform the job based on due authority levels.

 The tools which has been used to create the MIS are a bit expensive but as they are the most suitable and is also compatible with the current systems it was decided to purchase the necessary software for the MIS.

It can be concluded that the efforts put in throughout the development process, with enormous amount of support from all had not gone in vain and was directed towards a successful endeavor.

## **8.2. Further work**

As mentioned at the beginning of this report there are multiple systems residing in the DFCC group. For this project only 3 systems were considered.

As for future work it can be envisioned to gather all the data from all the relevant systems and to upload them to the MIS to get a bigger and better set of information on the groups standing.
